## FOREWORD

This publication provides the monthly Consumer Price Indices for Uganda (Composite) and for the ten centres of Kampala High Income, Kampala Middle Income, Kampala Low Income, Jinja, Mbale, Masaka, Mbarara, Fortportal, Gulu and Arua. All the baskets are for the urban households.

The current Consumer Price Index has been rebased from 2009/2010 to 2016/2017, using weights derived from the Uganda National Household Survey (UNHS VI) that was conducted from July 2016 to June 2017. The rebased CPI is classified using international standards, referred to as Classification of Individual Consumption According to Purpose (COICOP 2018). This is a shift from the COICOP 1999 that was used in the earlier series. COICOP 2018 is more detailed than the previous (1999) version, responding to the users' need for more detail, and addresses several other issues that required revision of the classification. The new COICOP of 2018 reflects the significant changes in goods and services in some areas, improved links of COICOP to other classifications, and addresses emerging statistical and policy needs of regional and international users.

At the elementary aggregate (EA) level, the indices are computed using the Jevons (Geometric Mean) method for all items within the elementary aggregates. The modified Laspeyres index formula is used to compute higher level indices. The National CPI is computed as a weighted average of the ten centres mentioned above and rebased indices are available from July 2017 to date at EA level.

## ACRONYMS AND DEFINITIONS

**COICOP:** Classification of Individual Consumption According to Purpose, is a nomenclature developed by the United Nations Statistics Division to classify and analyse individual consumption expenditures incurred by households, non-profit institutions serving households and general government according to their purpose.

**CPI:** Consumer Price Index - a general indicator of price levels paid by households for consumer goods and services.

**CPI basket:** A commonly used term for the goods and services priced for the purpose of compiling the CPI.

**Elementary aggregate (EA):** The lowest level of commodity classification in the CPI, and the only level for which index numbers are constructed by direct reference to price data.

**Inflation:** A term commonly used to refer to changes in price levels. A rise in prices is called inflation, and a persistent fall is called deflation.

**Jevons price index:** An elementary price index defined as the un-weighted geometric average of the sample price relatives. It can also be defined as the un-weighted geometric average of the current to base period price relatives.

**Laspeyres price index:** The Laspeyres price index is an index formula used in price statistics for measuring the price development of the basket of goods and services consumed in the base period. The question it answers is how much a basket that consumers bought in the base period would cost in the current period.

**Outlet:** The interface between a supplier of products and the consumer. It may be a shop, a market stall, a catalogue, a website etc. Also referred to as a "retail outlet", although it can include wholesale outlets which also sell directly to the consumers

**Outlier:** A term used to describe any extreme value in a set of data, such as a price or price relative that requires further investigation or has been verified as incorrect

**Price relative:** A measure of price movements: the ratio of the price level in one period to the price level in another.

**Reference base:** The period in which the CPI is given a value of 100.0. The CPI is currently on a reference base of 2016/17.

**Weight:** The measure of the importance of an item in the index regimen relative to the other items. Weights can be expressed in either quantity or value terms. Value weights are used in the CPI.

## 1.0 HIGHLIGHTS OF UGANDA CPI FOR AUGUST 2024

### 1.1 Annual Headline Inflation

The Annual Inflation as measured by the Consumer Price Index for Uganda for the 12 months to August 2024 is 3.5 percent compared to 4.0 percent registered in the year ended July 2024.

The Annual Inflation of August 2024 is largely attributed to Annual Core Inflation registered at 3.9 percent compared to 4.0 percent that was recorded in the year ended July 2024. The Annual Services Inflation, recorded at 6.2 percent in August 2024 compared to 6.5 percent for July 2024, was the main driver of Annual Core Inflation due to Passenger Transport Services Inflation. Passenger Transport Services Inflation registered at 6.9 percent in the year ending August 2024 compared to 8.2 percent registered in the year ended July 2024. In addition, Food and Beverage Serving Services Inflation registered 2.7 percent in the year ending August 2024 compared to 3.8 percent registered in the year ended July 2024. Financial Services Inflation slowed down to 4.3 percent in the year ending August 2024 compared to 5.0 percent registered in the year ended July 2024. The other driver of Annual Core Inflation was Annual Other Goods Inflation that is recorded at 2.1 percent in the year ending August 2024 compared to 2.0 percent recorded in the year ended July 2024. This was mainly due to Rice prices that registered minus 5.0 percent in August 2024 compared to minus 10.1 percent registered in July 2024. Maize Flour prices registered minus 24.5 percent in August 2024 compared to minus 26.1 percent recorded in July 2024.

Furthermore, Annual Energy Fuel and Utilities (EFU) Inflation is recorded at 4.7 percent in the year ending August 2024 compared to 6.2 percent that was registered in the year ended July 2024. This was mainly due to Solid fuels inflation that increased to 9.4 percent in August 2024 compared to 13.3 percent registered in July 2024. Charcoal and firewood were the main drivers for Solid Fuel Inflation. In addition, Liquid Energy Fuels Inflation recorded 3.8 percent in the year ending August 2024 compared to 5.1 percent in the year ended July 2024, driven by Petrol and Diesel prices that increased on the annual basis.

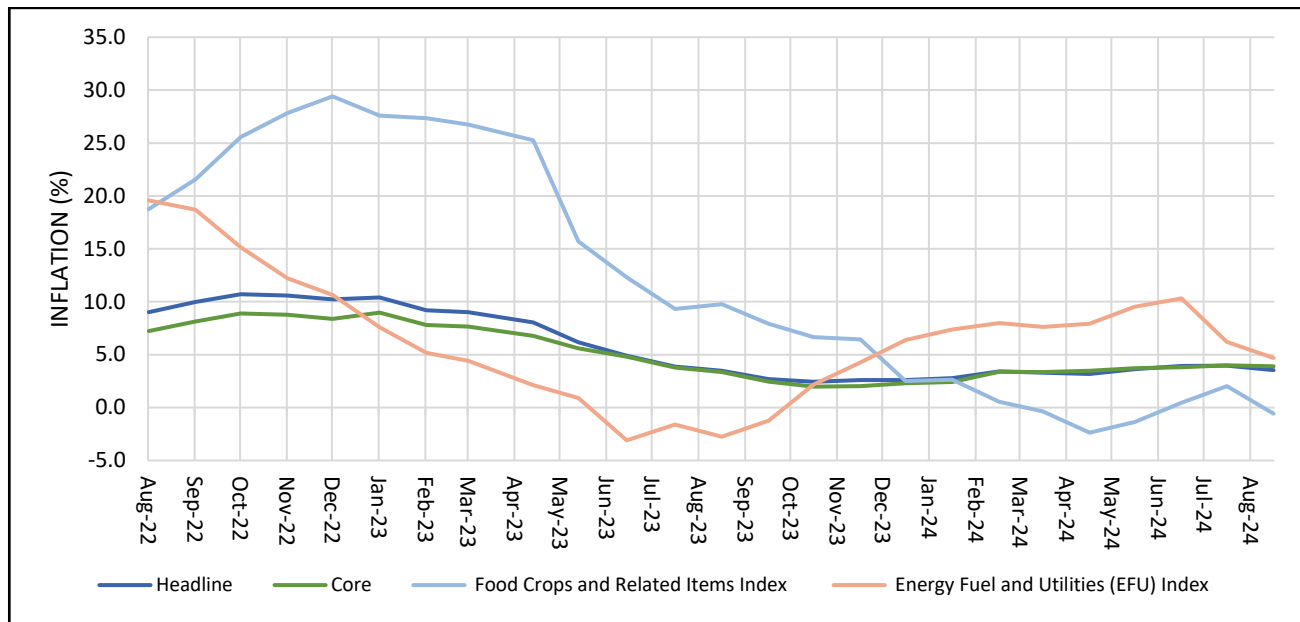

Annual Food Crops and Related Items Inflation was recorded at minus 0.6 percent in the year ending August 2024 compared to 2.0 percent registered in the year ended July 2024. This was mainly attributed to a drop in the prices of Round Onions (by minus 25.5 percent compared to 29.6 percent in July 2024), Matooke (by minus 2.1 percent compared to 3.6 percent in July 2024), Fresh Cassava (by minus 27.0 percent compared to minus 21.0 percent in July 2024) and Cabbages (increased by 20.0 percent to 32.5 percent in July 2024).

Table 1 shows Annual Headline Inflation and its categories for July 2024 and August 2024.
