## FOREWORD

---

This publication provides the monthly Consumer Price Indices for Uganda (Composite) and for the ten baskets of Kampala High Income, Kampala Middle Income, Kampala Low Income, Jinja, Mbale, Masaka, Mbarara, Fortportal, Gulu and Arua. All the baskets are for the urban households.

The current Consumer Price Index was rebased from 2005/2006 to 2009/2010, using weights derived from the Uganda National Household Survey (UNHS IV) that was conducted from May 2009 to April 2010. During the rebasing exercise, Kampala was further decomposed into three baskets from the two that has been existing. In addition, Fortportal Centre was incorporated into the Index. The rebased CPI is now classified using international standards, referred to as Classification of Individual Consumption According to Purpose (COICOP). This is a shift from the Central Product Classification (CPC) that was used in the earlier series.

At the elementary aggregate (EA) level, the indices are computed using the Jevons (Geometric Mean) method for all items within the elementary aggregates. The modified Laspeyres index formula is used to compute higher level indices. The National CPI is computed as a weighted average of the ten baskets mentioned above and indices are available from the EA level.

## ACRONYMS AND DEFINITIONS

**COICOP:** Classification of Individual Consumption According to Purpose, is a nomenclature developed by the United Nations Statistics Division to classify and analyse individual consumption expenditures incurred by households, non-profit institutions serving households and general government according to their purpose.

**CPI:** Consumer Price Index - a general indicator of price levels paid by households for consumer goods and services.

**CPI basket:** A commonly used term for the goods and services priced for the purpose of compiling the CPI.

**Elementary aggregate (EA):** The lowest level of commodity classification in the CPI, and the only level for which index numbers are constructed by direct reference to price data.

**Inflation:** A term commonly used to refer to changes in price levels. A rise in prices is called inflation, and a persistent fall is called deflation.

**Jevons price index:** An elementary price index defined as the un-weighted geometric average of the sample price relatives. It can also be defined as the un-weighted geometric average of the current to base period price relatives.

**Laspeyres price index:** The Laspeyres price index is an index formula used in price statistics for measuring the price development of the basket of goods and services consumed in the base period. The question it answers is how much a basket that consumers bought in the base period would cost in the current period.

**Outlet:** The interface between a supplier of products and the consumer. It may be a shop, a market stall, a catalogue, a website etc. Also referred to as a "retail outlet", although it can include wholesale outlets which also sell directly to the consumers

**Outlier:** A term used to describe any extreme value in a set of data, such as a price or price relative that requires further investigation or has been verified as incorrect

**Price relative:** A measure of price movements: the ratio of the price level in one period to the price level in another.

**Reference base:** The period in which the CPI is given a value of 100.0. The CPI is currently on a reference base of 2009/10.

**Weight:** The measure of the importance of an item in the index regimen relative to the other items. Weights can be expressed in either quantity or value terms. Value weights are used in the CPI.
