FOREWORD

The Uganda Functional Difficulties Survey (UFDS) 2017 is the first of its kind in Uganda. It was based on a sub-sample of the Uganda Demographic and Health Survey (UDHS) 2016 and carried out in UDHS households that had persons with disabilities at the time of the survey. The main objective of the UFDS was to collect high-quality data on functional difficulties in Uganda to help in the monitoring and evaluation of disability-related programmes and interventions, including national and international development agenda frameworks such as the National Development Plan II, the Global Agenda 2030 and the Africa Agenda 2063.

The UFDS 2017 comprised three modules: the Adults module (for persons aged 18 years and above) and two modules for children – one for children aged 5–17 years and one for those below 5 years of age. The rich data set compiled from the survey was based on recommendations from the UN Committee on the Rights of Persons with Disabilities and the Washington Group on Disability Statistics. The estimates are comparable at the international level and representative of up to 15 of Uganda’s sub-regions. The data cover a wide range of topics, including disability prevalence, use of assistive devices, discrimination and violence against women.

The Uganda Bureau of Statistics (UBOS) expresses gratitude to the Government of Uganda, the United Nations Children's Fund (UNICEF) and the UK Department for International Development (DFID) for the technical and financial support that enabled successful implementation of the survey. Our appreciation is extended to the Ministry of Gender, Labour and Social Development (MGLSD) for technical backup during the questionnaire design, staff training and survey implementation. We are also grateful to the National Council for Disability (NCD), the National Union of Disabled Persons of Uganda (NUDIPU) and other Disabled Peoples Organizations for the timely guidance in the implementation of the survey.

Appreciation goes to the Board, management and staff of UBOS for the overall coordination and implementation of the survey. We also wish to acknowledge the support local governments gave to the interviewers during fieldwork and express our appreciation to respondents, especially persons with disabilities, who spared their time to participate in the survey.

The Bureau urges the public to utilize the findings in making informed decisions and in planning.

BEN PAUL MUNGYEREZA
Executive Director
Uganda Bureau of Statistics
PREFACE

A lack of disaggregated data on disability has severely affected the access of persons with disabilities in Uganda to appropriate services, information and resources. This has been further complicated by negative societal attitudes, cultural myths and a lack of awareness about the rights of persons with disabilities, which has restricted their equal participation in the socio-economic development of the country.

The Uganda Functional Difficulties Survey (UFDS) 2017 was conducted by the Uganda Bureau of Statistics (UBOS) with the Ministry of Gender, Labour and Social Development (MGLSD) to generate information and data on persons with disabilities in Uganda to inform planning, budgeting, implementation, monitoring and reporting on disability. It was conducted and implemented in line with national and international frameworks, such as Vision 2040, the National Development Plan II, the UN CRPD and SDGs. Utilization and operationalization of this information is therefore important in order to address and redress disadvantages faced by persons with disabilities.

I am certain that this study will raise awareness and resolve some concerns about disability since the analysis has utilized internationally agreed best practices. The results will contribute to inclusive planning and holistic implementation of interventions directed at persons with disabilities.

I wish to express my gratitude to the Government of Uganda, UNICEF, the UK Department for International Development (DFID) and all representatives of persons with disabilities for the technical and financial support they provided and to UBOS for guiding and undertaking the study. I appeal to my ministry, academia and all stakeholders to utilize this data in their planning and decision-making processes.

We request that UBOS makes this data collection a routine and continuous exercise.

PIUS BIGIRIMANA
Permanent Secretary
Ministry of Gender, Labour and Social Development

## Key Indicators

### Birth Registration

33% of all children *under 5 years* were registered at birth with a civil authority (the percentage is the same among those with and without disabilities).

### Empower and Promote Social Inclusion

- **36%** of adults with disabilities own a mobile phone.
- **52%** of adults without disabilities own a mobile phone.
- **0.9%** of adults with disabilities have internet access (and used the internet at least once a week during the previous 3 months).
- **2.2%** of adults without disabilities have internet access (and used the internet at least once a week during the previous 3 months).

### Disability Prevalence Rates

- **3.5%** of children aged 2–4 years had disabilities.
- **7.5%** of children aged 5–17 years had disabilities.
- **16.5%** of adults are persons with disabilities.

### Health Insurance Coverage

- **1.2%** of adults had health insurance.
- **0.6%** of children 5–17 years had health insurance.
- **0.4%** of children aged 2–4 years had health insurance.

### Awareness and Use of External Economic Support

- **52%** of households were aware of economic assistance programmes.
- **4%** of households have received external economic support.

### Use of Assistive Devices Among Children 5–17 Years

- **2.3%** of children with impaired sight use glasses/contact lenses.
- **1.4%** of children years with impaired hearing use hearing aids.
- **9.6%** of children years with walking difficulties use equipment/assistance.

### Violence Against Women

- **36%** of female children 5–17 years with disabilities had experienced physical or sexual violence.
- **58%** of female adults had experienced physical or sexual violence.

### Subjective Well-Being (18 Years and Above)

- **36%** of persons with disabilities are very or somewhat happy.
- **17%** of persons without disabilities are very or somewhat happy.
- **39%** of persons with disabilities perceive a better life ahead.
- **55%** of persons without disabilities perceive a better life ahead.

### Coverage of School Support During Current School Year Programmes

- **19%** of children 6–16 years with disabilities received support.
- **18%** of children 6–16 years without disabilities received support.

### Discrimination and Harassment Based on Disability in Past 12 Months

- **12%** female adults
- **17%** male adults
- **13%** boys 5–17 years
- **19%** girls 5–17 years
1.0 INTRODUCTION

Uganda has a rich policy and legislative framework for the inclusion of persons with disabilities. Over the years, this has been adapted to respond to development trends. During the colonial and early post-colonial eras, services for persons with disabilities were provided by institutions. Today, Uganda’s disability policy and legislative framework emphasizes a rights-based approach to disability and takes into account ratified conventions, regional treaties, laws, policies, regulations, guidelines and executive directives (presidential manifestos), within the framework of the Constitution of the Republic of Uganda (1995) and the National Policy on Disability (2006).

The sections below provide an analysis of Uganda’s disability policy and legislative framework and how it is implemented, and emphasizes the need for sound research for development, including statistics. Both the National Policy on Disability 2006 and the Disability Act 2006 emphasize the need for research and documentation and the dissemination of best practices and experiences for the replication and scaling up of interventions by all actors, at all levels. Various studies – including the UNICEF/MGLSD *Situation Analysis on Children with Disabilities Living in Uganda 2014*; the *Mapping Study on Community Based Rehabilitation programmes in Uganda 2015*; the *Disability Scoping Study 2009*; and *Disability in Uganda*: report of a UNDESA scoping mission 2016\(^1\) – also stress the need for continuing research to inform and improve practice.

1.1 NATIONAL LAWS AND POLICIES IN UGANDA

In line with its 1995 constitutional obligation to respect the dignity and rights of persons with disabilities, and in response to the advocacy initiatives of organizations representing persons with disabilities, Uganda has enacted several disability-friendly laws.\(^2\) These laws include: the National Council on Disability Act 2003 (with additional amendments 2013); the 2006 Disability Act; the 2006 Equal Opportunities Commission Act 2006; the 1997 Local Government Act and the 1996 Children’s Statute 1996 (with amendments in 2016). A number of policies and policy guidelines also support interventions for persons with disabilities. These include, the 2015 Orphans and Vulnerable Children Policy, the 2006 National Policy on Disability, the 2012 Disability Guidelines and the Alternative Care Framework. Additional laws and policies that directly and/or indirectly address disability are listed in Appendix A1.

1.2 CONVENTIONS AND THE DEVELOPMENT AGENDA

Uganda’s development trajectory is not devoid of the global policy and development agenda and therefore, the local policy and legislative framework in guided by the international conventions the country has ratified. These include:

- United Nations Convention on the Rights of Persons with Disabilities (CRPD)
- International Covenant on Civil and Political Rights
- International Covenant on Economic, Social and Cultural Rights
- Convention against Torture

---

\(^1\) The United Nations Department for Economic and Social Affairs (UNDESA) undertook a scoping mission study in Uganda in 2015/16 to establish the disability structures, legislative and policy framework and how these resonated and/or diverged from the CRPD articles and/or recommendations.

\(^2\) Constitution of the Republic of Uganda, Objective IV and XXIV; Articles 21 (2), 30, 32(1), 35(1), 59(4) and, 78(1)
Uganda Functional Difficulties Survey 2017

- Convention on the Elimination of all forms of Discrimination against Women
- Convention on the Rights of the Child
- The UN Standard Rules on the Equalization of Opportunities for Persons with Disabilities
- Mine Ban Treaty (applies only to persons with disabilities whose disability was caused by a mine)
- Convention on the Elimination of All Forms of Racial Discrimination.

Uganda ratified the CRPD and its optional protocol on 28 September 2008 and is explicitly required to monitor its implementation by generating data. The protocol emphasizes the importance of mainstreaming disability issues as an integral part of relevant sustainable development strategies. It is further concerned that, despite the various instruments and undertakings, in all parts of the world persons with disabilities continue to face barriers to their participation as equal members of society and violations of their human rights.

One of the concluding observations in the CRPD Committee’s 2016 report on Uganda – relating to Article 31 on statistics and data collection – states that:

60. **The Committee is concerned about the lack of systems to collect information on the situation of persons with disabilities, including refugees.**

61. **The Committee recommends that the State party:**

   (a) Systematically facilitate the collection, analysis and dissemination of disaggregated data about persons with disabilities and the barriers they face;

   (b) Pay attention to the links between article 31 of the Convention and target 17.18 of the Sustainable Development Goals.

Uganda has also signed up to and works towards achieving the Sustainable Development Goals (SDGs), a global development framework aimed at ending poverty and ensuring that all people enjoy peace and prosperity. SDGs 1, 2, 4, 8, 11, 16 and 17 have targets and indicators that relate directly to disability.

### 1.3 UGANDA FUNCTIONAL DIFFICULTIES SURVEY

In 2017, as coordinator of the National Statistical System, the Uganda Bureau of Statistics (UBOS) undertook the Uganda Functional Difficulties Survey (UFDS). Its broad aim was to provide policy makers in the Ministry of Gender, Labour and Social Development (MGLSD), Ministry of Health (MoH), Ministry of Education and Sports (MoES), among others, with information to monitor and plan for future interventions around disability, especially in its reform activities. The UFDS also aimed to provide information on the prevalence of adult and child disability in the country, levels of discrimination, and the status of equal opportunities for persons with disabilities.

Specifically, the UFDS collected information on the prevalence of discrimination, violence against persons with disabilities, accessibility to services and deprivation, etc. It also aimed at generating other indicators relevant to the 2006 Persons with Disabilities Act, the National Development Plan II (NDP), SDGs and CRPD.

This report therefore provides information about the definition and measurement of disability in Uganda, Uganda’s legislative and legal frameworks with regard to disability, and the findings of the UFDS 2017.
DEFINING AND MEASURING DISABILITY IN UGANDA
2.0 KEY DEFINITIONS OF DISABILITY

Uganda is a Party to the UN Convention on the rights of Persons with disabilities (CRPD) and submitted its Initial Report on the CRPD in 2014. In their concluding observations on the report, the CRPD Committee raised concern about the varying definitions of disability in Uganda’s legislation and about policies that are not in line with some CRPD articles. In response to these concerns, efforts were made to harmonize the definition of disability in the data collection process of this survey. Furthermore, the results provide statistics and data to inform the review of existing policies and/or the upgrading or development of new policies in line with the CRPD.

In its definition of persons with disabilities, the CRPD includes ‘those who have long-term physical, mental, intellectual or sensory impairments, which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others’. This definition was used in the survey and persons with disabilities were identified using the Washington Group on Disability Statistics (WG)1 standard as follows:

- **Adults with disabilities:** Any adult for whom any one domain is coded with ‘a lot of difficulty’ or ‘cannot do at all’. The domains include seeing, hearing, walking, self-care, communication, remembering and concentrating.

- **Children aged 5–17 years with disabilities:** Any child in the age group who had a response of ‘a lot of difficulty’ or ‘cannot do at all’ in any of the following domains: seeing, hearing, walking, self-care, communication, learning things, remembering, concentrating, accepting change to his/her routine, difficulty controlling his/her behaviour, difficulty making friends. Plus, children who seemed very anxious, nervous or worried daily and those who seemed very sad or depressed daily.

- **Children aged 2–4 years with disabilities:** Any child in the age group who had a response of ‘a lot of difficulty’ or ‘cannot do at all’ in any of the following domains of: seeing, hearing, walking, fine motor (picking up small objects with (his/her) hand), communication, learning things, playing and behaviour (i.e. how much he/she kicks, bites or hits other children or adults).

- **Mental disorders:** Any persons with any of the following conditions: hydrocephalus, down syndrome or autism2

- A person was considered to have **depression or anxiety** if they reported to be depressed or anxious on a daily or weekly basis irrespective of the intensity with which they felt that way (e.g. ‘a little’, ‘a lot’ or ‘somewhere in between’)

- A person was considered to have **psychosocial** problems if they reported a mental disorder, depression and anxiety

- A person was considered to have **intellectual** problems if they cannot remember or concentrate at all

- A person with **psychosocial and/or intellectual** disability was considered as one who had any of the following conditions: depression, anxiety, mental disorder or cannot remember or concentrate at all.

2.1 OVERVIEW OF DISABILITY STATISTICS IN UGANDA

The lack of adequate, reliable, relevant and recent information on the nature and prevalence of disability in Uganda remains a challenge. Uganda has had six censuses since 1948, but the first attempt to collect national-level disability data was in the 1991 census. The 2002 and 2014 National Population and Housing Censuses included questions on physical and mental problems, but did not include a disability measure. The 2014 National Household Survey included a module on mental health, but did not include any disability questions. The survey considered only conditions that can be easily noticed.
Censuses included questions on disability. Furthermore, the following household surveys collected data to measure the prevalence of disability: the 2004 Northern Uganda Survey (covered the then 18 Districts under the Northern Uganda Social Action Fund (NUSAFA) programme); the 2005/2006 Uganda National Household Survey; and the 2006, 2011 and 2016 Uganda Demographic and Health Surveys (UDHSs).

Information from these surveys and censuses has to be used with caution when making a trend analysis since there have been changes in the phrasing of questions and the definition of persons with disabilities. Apart from the UDHSs, the results from the outlined sources may not be comparable. Since 2006, when UBOS adopted the Washington Group questions for disability measurement, similar questions and definitions of disability have been used in censuses and surveys in Uganda.

Data on disability can also be sourced from the administrative/official records of the following institutions: Uganda National Examinations Board, Electoral Commission, Uganda Local Governments Association, Ministry of Gender, Labour and Social Development (MGLSD), Ministry of Education and Sports (MoES), United Nations High Commissioner for Refugees, National Council for Disability (NCD), Equal Opportunities Commission and disabled persons’ organisations.

The Washington Group on Disability Statistics

The Washington Group on Disability Statistics (WG) is a UN City Group that undertook to improve the quality and international comparability of disability measurement in censuses and surveys. It developed, tested and adopted a short set of six questions on functioning based on six core functional domains (seeing, hearing, walking, cognition, self-care, and communication) for use in national censuses and surveys. The information that results from using these questions typically:

a) represents the majority of, but not all, persons with limitation in basic actions
b) represents the most commonly occurring limitations in basic actions
c) captures persons with similar problems across countries.

The six-question set was recommended by the UN for use in the 2020 round of population censuses, and a UN-sponsored Disability Data Expert Group\(^3\) recommended them for use in disaggregating the SDGs. They are also approved for monitoring implementation of the CRPD.

**THE WG SHORT SET QUESTIONS**

<table>
<thead>
<tr>
<th>Question</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Do you have difficulty seeing, even if wearing glasses?</td>
</tr>
<tr>
<td>2.</td>
<td>Do you have difficulty hearing, even if using a hearing aid?</td>
</tr>
<tr>
<td>3.</td>
<td>Do you have difficulty walking or climbing steps?</td>
</tr>
<tr>
<td>4.</td>
<td>Do you have difficulty remembering or concentrating?</td>
</tr>
<tr>
<td>5.</td>
<td>Do you have difficulty (with self-care such as) washing all over or dressing?</td>
</tr>
<tr>
<td>6.</td>
<td>Using your usual language, do you have difficulty communicating, (for example understanding or being understood by others)?</td>
</tr>
</tbody>
</table>

Each question has four response categories, which are read after each question. The response categories capture the full spectrum of functioning from mild to severe as follows:

1. No, no difficulty
2. Yes, some difficulty
3. Yes, a lot of difficulty
4. Cannot do it at all

Note that the inclusion of assistive devices was considered for two domains only, seeing and hearing, as limitations in these domains can often be easily overcome with the use of glasses or hearing aids.

---

2.2 EVOLUTION OF DISABILITY MEASUREMENT IN UGANDA

Results from the censuses and surveys have shown that using the Washington Group short set of questions leads to higher disability estimates than the traditional single question used previously. The following boxes illustrate the methodology used and how this has affected statistics relating to the prevalence of disability in Uganda since 1991.

1991 POPULATION AND HOUSING CENSUS

- Covered 10% of rural areas, 100% of urban areas
- Did not include people in institutions

**Question asked:** “Is there anyone in this household who has a disability?”

**Response categories:** • Yes • No

**Disability data collected on:** • Type of disability • Cause of disability

**Rehabilitation measures taken**
• Disability prevalence rate 1.2%

2002 POPULATION AND HOUSING CENSUS

- Coverage universal

**Question asked:** “Is there anyone in this household who has difficulty in seeing, walking, hearing, climbing stairs, etc., that has lasted or is expected to last 6 or more months?”

**Response categories:** • Yes • No

**Multiple disability collected (max. 2 types)**

**Disability data collected on:**
• Type of disability • Cause of disability • Rehabilitation measures taken

**Disability prevalence rate 3.5%**

2014 NATIONAL POPULATION AND HOUSING CENSUS

- Covered all household population aged 2 years and above throughout entire country

**Questions asked:**
1. Do you have difficulty seeing, even if wearing glasses?
2. Do you have difficulty hearing, even if using a hearing aid?
3. Do you have difficulty walking or climbing steps?
4. Do you have difficulty remembering or concentrating?

**Response categories for each question:**
• No – no difficulty
• Yes – some difficulty
• Yes – a lot of difficulty
• Cannot do at all

**Data provides for multiple disability (max. 4 types)**

**Disability prevalence rate for persons aged 2 years and above 13.5%**

The WG short set of questions was used in surveys and censuses from 2006 onwards. Because the WG short set of questions was designed for the adult population (although they have been used for some child-age groups), the analysis was restricted to individuals aged five years and above. The WG therefore developed a set of survey questions to produce internationally comparable data on disability in children aged 2 to 17 years. These improved measures of disability were used in the detailed 2017 Uganda Functional Difficulties Survey.

---

CHAPTER 3

THE 2017 UGANDA FUNCTIONAL DIFFICULTIES SURVEY
3.1 INTRODUCTION TO THE SURVEY

The Uganda Functional Difficulties Survey (UFDS) 2017 was a national sample survey undertaken by the Uganda Bureau of Statistics (UBOS) in accordance with the UBOS Act, 1998. It was designed as a response to the data needs prescribed by the UN Convention on the Rights of Persons with Disabilities (CRPD), recommendations from the National Policy on Disability in Uganda (2006), and other national documents with recommendations concerning targeted disability measurement. Information from the UFDS is essential for informed policy making and planning, and for the monitoring and evaluation of disability programmes. It provides national and regional disability prevalence rates as well as related human and social development parameters that relate to disability. These are disaggregated by region, gender, age and difficulty strands, among other things. The data are generally comparable to similar surveys in other developing countries and are an addition to the growing international database of disability-disaggregated indicators.

Funded by the UK’s Department for International Development (DFID) and UNICEF, the survey was implemented by UBOS and Ministry of Gender Labour and Social Development (MGLSD). As the main users of the survey results, the MGLSD and Ministry of Health (MoH) had a major role in guiding the design of the questionnaires and survey content. In addition, a number of organizations were consulted through stakeholder engagement during the questionnaire review stage (see Appendix Table A.2). UBOS also received technical advice on the design and implementation of the survey from the Washington Group on Disability Statistics and UNICEF.

UBOS was responsible for managing the survey, including hosting meetings to discuss the questionnaires with representatives from major users, technical institutions and international bodies. It was also responsible for overseeing day-to-day operations, i.e. recruiting, training and supervising field workers and data processing staff, and analysis and report writing processes.

3.2 SURVEY OBJECTIVES

The long-term objective of the survey was to strengthen the technical capacity of UBOS to plan, conduct, process, and analyze data from disability and health surveys.

The specific objectives of the UFDS 2017 were as follows:

1. To provide data at the national and subnational level that will allow the computation of disability rates by selected characteristics
2. To undertake a test of response options to the WG short set of questions
3. To generate key indicators for monitoring the CRPD
4. To provide information for monitoring disability-related SDG indicators

---

5 Article 31 (2) of the CRPD states that, ‘The information collected in accordance with this article shall be desegregated, as appropriate, and used to help, assess the implementation of state parties’ obligations under the present convention and to identify and address the barriers faced by persons with disabilities in exercising their rights.’ Article 31 (3) states that, ‘State parties shall assume responsibility for the dissemination of these statistics and ensure their accessibility to persons with disabilities and others.’

### 3.3 Sample Design

The UFDS 2017 sample was designed to produce reliable baseline indicators at the national and urban-rural residence levels, and for 15 sub-regions. During data collection for the 2016 UDHS, 10,739 households were identified as having a member with a difficulty in one or more of the following areas: vision, hearing, walking, concentration/remembering, concentrating/understanding or self-care. At that time, consent was sought from the household head for another team to visit for the purposes of the UFDS.

For the 2016 UDHS, in the first stage 697 Enumeration Areas (EAs) were selected from the 2014 Uganda Population and Housing Census. In the second stage, households were selected based on a complete listing of households. In each EA, a new list of households was generated and 30 households were randomly selected. It was from among the 30 households sampled for the UDHS 2016 that households with members with disabilities were considered for the UFDS 2017.

### 3.4 Questionnaires and Other Survey Instruments

The basic approach of the disability measurement was to collect data that are comparable across countries. To achieve this, standard model questionnaires developed by the Washington Group on Disability Measurement for the UNICEF Multiple Indicator Cluster Surveys Round 6 (MICS-6) were adapted to the Uganda situation and needs. Additional questions of special interest to Uganda were added. Four questionnaires were used for the UFDS 2017: (i) Household Questionnaire, (ii) Child Questionnaire (0–4 years), (iii) Child Questionnaire (5–17 years), and (iv) the Adult Questionnaire (18 years and above).

After preparation of the questionnaires in English, the questionnaires were translated into seven major languages: Ateso, Ngakarimojong, Luganda, Lugbara, Luo, Runyankole-Rukiga and Runyoro-Rutoro. In order to verify the accuracy of the translations, back translations into English were conducted by a different set of translators. All problems that arose in the translation were resolved before a pretest of the survey.

The questionnaires were programmed into tablet computers to facilitate computer-assisted personal interviewing (CAPI) for data collection purposes and an option was provided to choose a questionnaire in one of the eight languages for use during each interview. The CAPI data collection system was developed by the UBOS data processing team using the mobile version of the Census and Surveys Programme (CSPro). During the interviews, the interviewers recorded questionnaire responses on the tablet computers. These were equipped with Bluetooth technology to enable remote electronic transfer of files, such as assignments from the team supervisor to the interviewers, individual questionnaires among survey team members, and completed questionnaires from interviewers to team supervisors.

All usual members and visitors in the selected households were recorded in the household questionnaire, the main purpose of which was to identify eligible respondents for the individual interviews. Information was also collected about social transfers and benefits.

The individual age-specific questionnaires were used to collect individuals’ age-relevant information as summarized below:

#### 0–4 years questionnaire:

1. Background characteristics (e.g. age, whether the person is an albino)
2. Child development milestones
3. Child functioning
3.5 PRETEST OF THE QUESTIONNAIRES

In February 2017, as soon as the questionnaires were finalized and approved and the tablet programming completed, UBOS carried out a pretest to detect any problems in the flow of the questionnaire and gauge the length of time required for interviews.

The pretest fieldwork took place in clusters in Wakiso and Kampala, districts that were not included in the UFDS 2017 survey sample area. Following debriefing sessions with the pretest field staff and the UFDS technical team on the basis of which modifications were made to the questionnaires. To get more familiar with interacting with and interviewing persons with different sorts of disability, teams then spent time collecting data in rehabilitation centres and training schools for persons with disabilities. At the end of the pretest, pretest staff were formally debriefed to gain their suggestions about how the field implementation activities could be improved. Results from the pretest were used to modify the survey instruments and other survey documents, in particular the software programs and field procedures used in conducting interviews with tablets.

3.6 TRAINING OF FIELD STAFF

UBOS recruited and trained 69 fieldworkers to serve as supervisors/CAPI managers, interviewers and reserve interviewers for the main fieldwork. These were divided into 14 teams, each of which had one team leader, three interviewers and one driver. The training course included instructions on interviewing techniques and field procedures, a detailed review of questionnaire content, instructions on administering the paper and electronic questionnaires, mock interviews between participants and practice interviews.

To stress the importance of the UFDS 2017, the training included presentations by staff from the MGLSD, National Council for Disability (NCD), Uganda Foundation for the Blind (UFB) – Uganda National Association of the Blind (UNAB), National Union of Disabled Persons of Uganda (NUDIPU) and a talk by a little person about his experience relating to Uganda-specific policies and programmes on disability.

Training participants took part in practical hands-on field practice before the actual fieldwork and evaluated through classwork, in-class exercises, quizzes and observations conducted during field practice. Team leaders and field data managers received additional instructions and practice on performing supervisory activities with the CAPI system. Supervisory activities included assigning households and receiving completed interviews from interviewers, recognizing and dealing with error messages, receiving a system update and distributing updates to interviewers, resolving duplicated cases, closing clusters, and transferring interviews to the central office. In addition to the CAPI material, team supervisors received additional training on their roles and responsibilities.
3.7 DATA COLLECTION

Data collection for the main survey took place over a period of three months. UBOS provided the field teams with letters of introduction to the Chief Administrative Officer (CAO)/Town Clerk when they travelled to the District. In turn, the teams secured the necessary introductory letters from the CAO and Sub-county chief prior to visiting any Enumeration Area (EA). While in the EA, the teams moved around with a local guide, preferably one who was a member of the local council executive committee.

Field staff were deployed in teams based on the main local language spoken and assigned an equal workload by their team leaders. After every visit, team leaders provided the project management team with a report about any problems encountered in the field and other information about the EA deemed relevant for interpretation of the information. The MGLSD, NCD and UFB supported the field supervision exercise.

Richard Opiro, 15, who was born deaf, during a class in Laroo Primary School in Gulu, Uganda.
3.8 PRESENTATION OF RESULTS

Results from the UFDS 2017 are presented as proportions, and most have been disaggregated by sex, age, place of residence, disability status and for 15 sub-regions, where possible. The districts (based on the 2017 list of Administrative Areas) were grouped into sub-regions as follows:

**SOUTH BUGANDA:** Butambala, Gomba, Mpigi, Bukomansimbi, Kalangala, Kalungu, Lwengo, Lyantonde, Masaka, Rakai, Ssembabule, Wakiso, Kyotera

**NORTH BUGANDA:** Buike, Buvuma, Kayunga, Kiboga, Kyankwanzi, Luwero, Mityana, Mubende, Mukono, Nakaseke, Nakasongola

**KAMPALA:** Kampala

**BUSOGA:** Bugiri, Namutumba, Buyende, Iganga, Jinja, Kaliro, Kamuli, Luuka, Mayuge, Namayengo

**BUKEDI:** Budaka, Butaleja, Kibuku, Pallisa, Tororo, Busia, Butebo

**ELGON:** Bulambuli, Kab porch, Kween, Bududa, Manafwa, Mbale, Sironko, Bukwo, Namisindwa

**TESO:** Amuria, Bukedea, Katakwi, Kumi, Ngara, Soroti, Kaberamaido, Serere

**KARAMOJA:** Abim, Amudat, Kaabong, Kotido, Moroto, Nakapiripirit, Napak

**LANGO:** Alebtong, Amolatar, Dokolo, Lira, Otuke, Apac, Kole, Oyam

**ACHOLI:** Agago, Amuru, Gulu, Lamwo, Pader, Kitgum, Nwoya, Omoro

**WEST NILE:** Adjumani, Arua, Koboko, Maracha, Moyo, Nebbi, Yumbe, Zombo, Pakwach

**BUNYORO:** Buliisa, Hoima, Kibaale, Kiryandongo, Masindi, Kagadi, Kakumiro

**TORO:** Bundibugyo, Kabarole, Kasese, Ntoroko, Kyenjojo, Kamwenge, Kyogege, Bunyabugabo

**KIGEZI:** Kabale, Kisoro, Kanungu, Rukungiri, Rubanda, Rukiga

**ANKOLE:** Buhweju, Bushenyi, Ibanda, Isingiro, Kiruhura, Mbarara, Mitooma, Ntungamo, Rubirizi, Sheema

**MAP 1: 15 SUB-REGIONS OF UGANDA**
3.9 RESPONSE RATES

Of the 10,739 households identified from the 2016 UDHS as having a member with a disability, 212 in remote, hard-to-reach areas were not included in the UFDS due to budget constraints. In addition, of the 10,527 included, 2,656 were not visited due to budget constraints and the long unanticipated time taken in tracking respondents so only 7,871 were visited by the field teams, of which 7,522 were occupied. Of the occupied households, 7,438 were successfully interviewed, which yielded a response rate of 98.9 per cent (see Table 3.1).

In the interviewed households, 15,278 adults were identified for individual interviews and interviews completed with 14,617 adults (99.7%). In the same households, 13,589 children aged 5 to 17 years were identified and 13,155 successfully interviewed (98.8%). In addition, 5,130 children aged 0 to 4 years were identified and 5,039 interviews successfully completed with mothers/caretakers (97.1%). Response rates were generally higher in rural areas than urban areas (see Appendix Table A.1).

CHAPTER 4

KEY FINDINGS
4.1 HOUSEHOLD POPULATION AND COMPOSITION

The headship of a household – the person acknowledged by its members as responsible for the day-to-day running of the household – is an important demographic variable. Although not necessarily the main income earner, he or she is responsible for making the main household decisions.

Table 4.1 shows that about four in every 10 households (38%) were headed by women.

There are more single orphans (11%) than double orphans (2%).

Two-thirds (61%) of children aged under 18 years are living with both biological parents.

4.2 CURRENT DISABILITY PREVALENCE, CAUSES AND USE OF ASSISTIVE DEVICES

4.2.1 CURRENT DISABILITY PREVALENCE

In order to establish a disability prevalence rate for each of the three age groups (2–4 years, 5–17 years and 18 years and above), all members of the household present at the time of the interview were asked about any difficulties they face in carrying out daily activities.

Table 4.2 shows that 17 per cent of adults (aged 18 years and above), seven percent of children aged 5 to 17 years and four per cent of children aged 2 to 4 years had a disability. The data further shows that for every type of disability, prevalence was highest among the adults, which implies disability increases with age (see Figure 4.0). For further details about the prevalence of disability and experience of difficulty in any of the six domains (seeing, hearing, walking, communication, self-care and remembering) by age, see Appendix Table A2. (See Appendix Table A3 for the distribution of disability prevalence across sub-regions.)

### Figure 4.0: Persons with Disabilities by Age Group (%)

[Graph showing the percentage of people with disabilities across different age groups.]
4.2.2 REPORTED PREVENTABLE CAUSES OF DISABILITY

The most common preventable cause of disability for adults was accidents at home (7%), malaria (4%) and road traffic accidents (4%). For children aged 2 to 17 years, the most common causes were congenital (i.e., from birth) or because of sickness such as malaria (10%) and measles (5%) (see Figure 4.1).

Figure 4.1: Persons by Reported Preventable Cause of Disability (%)

Causes of disability vary by region of residence (see Appendix Table A4). The data revealed that among adults: Kampala and Acholi regions had the highest number of cases due to home and road traffic accidents. Violence as a cause of disability was highest in Acholi and Karamoja sub-regions (8%). Job-related causes were predominant in both South and North Buganda compared with other regions. Measles as a cause of disability among adults is most predominant in the Teso region (7%). This information is useful to inform region-targeted interventions to prevent disability.

4.2.3 HABILITATION AND REHABILITATION

The 2006 Persons with Disabilities Act (art. 28) states that ‘Government shall provide supportive social services to persons with disabilities through acquisition of assistance devices, medical specialty and assistance personal services.’ The CRPD further emphasizes that it is important for a country to promote the availability, knowledge and use of assistive devices and technologies designed for persons with disabilities to promote habilitation and rehabilitation. The UFDS 2017 therefore asked respondents whether they use assistive devices, if so, where they got them from, and, if not, whether they need them. An assistive device is designed, fabricated or adapted to assist a person with disability in performing a particular task, e.g. calipers, wheelchairs, etc.

Table 4.3 shows that 2 per cent of children and adults with sight difficulties use eyeglasses or contact lenses. The unmet need for eyeglasses or contact lenses is high (75% among children and 76% among...
Adults with albinism and sight difficulty were the greatest users of eyeglasses (35%) but also had the greatest unmet need (90%).

Children with a hearing difficulty are more likely than adults to use hearing aids, but still the figure is only 1.4 per cent compared with 0.5 per cent. Children also have a greater unmet need (76% compared with 68% among adults).

<td>38.0</td>
<td>*</td>
</tr>
</tbody>
</table>

*This was not asked of adults

**Source of assistive device**

All persons using an assistive device were asked where they had obtained it. Orthopedic workshops in health facilities were the major source, with higher percentages for adults (54%) than for children (42%). About four in every 10 children with disabilities obtained devices from other sources (Figure 4.2). These included those made at home and were mainly walking sticks (data not shown).

**FIGURE 4.2: SOURCES OF ASSISTIVE DEVICES (%)**

**Recommendation to use assistive device**

Parents and caretakers of children aged 2 to 4 years were asked whether and by whom their children had ever been assessed and recommended to use any of the following devices: eyeglasses, hearing aids or any equipment/assistance for walking.

Less than half of children aged 2 to 4 years (40%) had been assessed and recommended to use equipment or assistance for walking. None had been assessed for use of any other assistive device. The assessment and recommendation was mainly carried out by a community health worker (43%), staff at a health facility (30%) or another person, such as a schoolteacher (27%).
4.3 **EQUALITY AND NON-DISCRIMINATION**

Discrimination and stigma occur when people are treated unfairly because they are seen as being different from others. The Persons with Disabilities Act, 2006 provides a comprehensive legal protection for persons with disabilities in accordance with Articles 32 and 35 of the Constitution of Uganda. It makes provisions for the elimination of all forms of discrimination against persons with disabilities towards equalization of opportunities and for related matters.

The UFDS 2017 therefore considered discrimination as unfair treatment in various aspects of life, including: relationships, religious, cultural and social day-to-day activities. Table 4.4 shows that irrespective of age, persons with a deformity, with intellectual and/or psychosocial disabilities and dwarfs/little people are more likely to be discriminated against. Generally, for all forms of discrimination, more adults with disabilities experienced discrimination (41%) compared with children aged 5 to 17 years with disabilities (28%).

Table 4.5 shows the percentage of persons who have ever felt discriminated against or harassed based on a condition that makes them different from others. Generally, for all forms of discrimination or harassment, disability was the most reported (16% among children aged 5 to 17 years and 15% among adults). For the percentage of persons discriminated against by sub-region, see Appendix Table A5.

9 The INDIGO Study Group, Discrimination and Stigma Scale DISC 12 © 2008
4.4 ACCESS TO INFORMATION

Article 41 of the Constitution of Uganda stipulates that ‘Every citizen has a right of access to information in the possession of the State or any other organ of the State except where the release of the information is likely to interfere with the security of the State or the right to the privacy of any other person.’ In the same vein, Article 21 of the Persons with Disabilities Act states that ‘It shall be the duty of the responsible government authority to promote the rights of persons with disabilities to access information.’ With today’s technological advances, information communication technology (ICT) is a potentially life-changing prospect for the country, which can fuel development both socially and economically. The National Development Plan II envisages that the ICT sector will facilitate sustainable, effective and efficient development through harnessing and utilizing ICT in all spheres of life.

4.4.1 INFORMATION AND COMMUNICATION TECHNOLOGY (ICT)

The UFDS 2017 asked questions about access to and use of ICT equipment such as a computer, the internet and a mobile phone.

Table 4.6 shows that while 7 per cent of persons aged 18 years and above without a disability had ever used a computer, only 2 per cent of those with a disability had ever used one. It also shows a wide inequality between persons with disabilities and those without disabilities in their use of the internet and mobile phone ownership. Furthermore, persons with disabilities who live in urban areas are more like to have used a computer or internet.

Ownership of a mobile phone is becoming essential in today’s society, especially in emergencies. As Table 4.6 shows, half (51%) of persons without disabilities own mobile phones compared with 36 per cent of those with disabilities. However, mobile phone usage does not depend on phone ownership, with equal percentages (14%) of persons with and without disabilities having used a phone at least once a week in the three months prior to the survey.

4.4.2 CHALLENGES FACED IN ACCESSING INFORMATION

One of the concluding observations in Uganda’s initial CRPD report 10 raised concerns about the challenges faced by persons with disabilities in both rural and urban areas in gaining access to transportation and information in accessible formats such as sign language, braille and easy-to-read formats for persons with psychosocial and intellectual disabilities. The UFDS 2017 therefore sought to establish what challenges adults with disabilities had faced in accessing information during the 12 months prior to the survey.

As Table 4.7 below shows, one in every five persons with disabilities (22%) had faced challenges in accessing information, the biggest challenge being that information is in formats that are not easy to read, and a lack of software/assistive devices to access information.

A child reading Braille during his class at Gulu High School, northern Uganda. © UNICEF/UNI124705/Sibiloni In-house

About half (48%) of deaf persons faced challenges in accessing information because sign language is not readily available to them. There are major disparities seen by place of residence, with deaf persons in urban areas more likely to report lack of sign language as a challenge compared with their rural counterparts (74% versus 43% respectively). Similarly, more blind persons in urban areas (31%) reported lack of a Braille machine as a challenge in accessing information than blind persons in rural areas (16%), probably because there is more exposure to public information in urban areas but little is produced in Braille. The Marrakech treaty facilitates access to published works for persons who are blind, visually impaired, or otherwise print disabled. This seems not to have been fully implemented in Uganda.

Not shown are the various places where persons with disabilities reported finding it difficult to access information. The most frequently mentioned were the community (30%), health facilities (8%) and school/training institutions (5%). Other places include homes, churches, banks, etc.

Figure 4.3 shows that 50 per cent of deaf persons aged 18 and above are able to access information using sign language. Six per cent of deaf persons are also blind, so using sign language to access information is not applicable for them.

### Figure 4.3: Ability of the Deaf to Access Information Using Sign Language (%)

- **6%** Not applicable
- **44%** Unable to access information using sign language
- **50%** Can access information using sign language

### 4.4.3 Accessible Transport

Adequate, efficient and accessible transport to convey people or goods from one place to another is required to support productivity and assist in development. However, many barriers prevent persons with disabilities getting from place to place. These include unfair treatment from passengers or vehicle operators when using public transport.

The Ministry of Works and Transport’s Strategic Plan (2011/12–2015/16) commits to promoting integration of crosscutting issues such as disability in the sector. In Article 22 of the Persons with Disabilities Act, ‘transport disadvantaged persons’ includes transporting persons:
a) Using mobility devices such as crutches or calipers, or wheelchairs
b) Using sensory devices such as white canes, low vision devices or hearing aids
c) Who need assistance such as those using sign language or other support in communication
d) Having difficulty in negotiating steps, climbing stairs or walking long distances, including persons having health problems, or those carrying heavy loads.

The UFDS 2017 collected information about persons who have been discriminated against when using public transport and found that there is a strong association between disability and facing discrimination in public transport. As Figure 4.4 shows, adults with disabilities are twice as likely to be discriminated against when using public transport than children with disabilities. This may be because adults are more likely to use public transport. On the other hand, more than half of children with dwarfism (52%) felt much more discriminated against when using public transport than adults with dwarfism (15%).

4.5 **RIGHT TO LIFE**

Every human being has a right to effective enjoyment of life, including persons with disabilities on an equal basis as reaffirmed in Article 10 of the CRPD. The right to life hinges on the belief that a human being has the right to live and, in particular, not to be killed by another human being.11 Being attacked using a weapon threatens life.

Interviewees for the UFDS were asked whether during the three years prior to the survey anyone had taken something from them forcefully or threatening to use force. If the respondent had had such an experience, he or she was asked about when and where the incident had occurred, and whether anything had been stolen.

---

11 Universal Declaration of Human Rights, Article 2 Right to life: ‘Everyone’s right to life shall be protected by law. No one shall be deprived of his life intentionally save in the execution of a sentence of a court following his conviction of a crime for which this penalty is provided by law.’
Figure 4.5 shows that on average about one in every five persons had been robbed by someone using a weapon such as a gun, knife or something else in a way that really frightened them in the last 12 months. These attacks or threats had happened at home or outside the home, such as in other people’s homes, on the street, at school, on public transport, in restaurants, or at their workplace. Over one-third of persons with albinism (35%) reported that they had been personally attacked or threatened in a way that really frightened them.

The Constitution of Uganda (Article 22) recognizes and protects the right to life and survival of every person. It also emphasizes that the life of an unborn child must not be ended. The UFDS 2017 therefore collected information from adults with a disability about whether they had faced discrimination in starting a family or having children. Specific emphasis was given to the behaviour of health professionals, friends and family, as well as to how they or their partners were treated during pregnancy or childbirth. Discrimination during pregnancy can cause stress to the mother and lead to death of the unborn child, premature birth and low birth weight.12

Figure 4.6 shows that for persons with disabilities, males were slightly more likely to have reported having faced unfair treatment in starting a family or having children compared with females (6% and 5% respectively).

4.6 EQUAL RECOGNITION BEFORE THE LAW

The CRPD Committee of Experts raised concerns about Ugandan legislation, including the Succession Act (2011), the Divorce Act (1904) and the Hindu Marriage and Divorce Act (1961), which restricts the legal capacity of persons with disabilities, in particular persons with intellectual and/or psychosocial disabilities. It also expressed concern about the de facto guardianship of persons with disabilities within the family, which deprives them of their ability to make choices in areas such as marriage and inheritance.

Figure 4.7 shows that males with disabilities were more likely to be discriminated against in matters relating to marriage or divorce. These include the ability to find a partner or spouse, problems during the relationship, and divorce settlements. In the 12 months preceding the survey, males with disabilities were almost twice as likely to have had another person making a formal or informal decision for them on marriage affairs such as whether to stay in a marriage or to divorce compared with their female counterparts (11% and 6% respectively). Figure 4.7 further shows that persons with intellectual and/or psychosocial disabilities were the most affected.

![Figure 4.7: Persons with Disabilities who have had unequal recognition in marriage matters by sex (%)](image)

Figure 4.7 shows that generally more adults than children were likely to have been detained or locked up as a result of their disability. Variations by gender were minimal. On the other hand, slightly more children with anxiety/depression compared with their adult counterparts had been detained or locked up because of their disability.

The UFDS 2017 collected information on how respondents felt walking alone in their neighbourhood or when at home alone, after dark. As Figure 4.9 shows, persons with disabilities were more than twice as likely not to walk alone after dark (29%) compared with those without disabilities (11%). Of those who do walk alone in their neighbourhood after dark, 46 per cent of persons without disabilities said they felt safe compared with 27 per cent of those with disabilities.
Figure 4.9 shows that more persons with disabilities feel unsafe when at home alone after dark compared with those without disabilities (26% and 18% respectively). Persons with disabilities were also more likely not to be left alone at home after dark (13%) compared with those without disabilities (6%). Such findings may portray a good security measure.

Figure 4.10 shows that more persons with disabilities feel unsafe when at home alone after dark compared with those without disabilities (26% and 18% respectively). Persons with disabilities were also more likely not to be left alone at home after dark (13%) compared with those without disabilities (6%). Such findings may portray a good security measure.

### 4.8 Freedom From Torture or Cruel, Inhuman or Degrading Treatment or Punishment

#### 4.8.1 Forced Medication

Articles 24 and 25 of the Constitution of Uganda and Article 42 of the Persons with Disabilities Act stipulate that a person shall not be subjected to any form of torture, cruel, inhuman or degrading treatment or punishment, or held in slavery. In its Uganda report, the CRPD Committee raised concerns about inhumane and cruel forced medical treatments, physical and chemical restraints and isolation faced by persons with disabilities, particularly persons with psychosocial and intellectual disabilities in psychiatric hospitals.

Figure 4.11 shows that persons with psychosocial/intellectual difficulties suffer most from being forced to take medical treatment in a cruel manner or being hospitalized or isolated from other people (7%). A slightly
higher percentage of males with disabilities (5%) than females (4%) reported that they were forced in a cruel manner to take medical treatment or hospitalised or isolated from other people because of their disability.

**4.8.2 HANDLING BY POLICE**

The Constitution of Uganda (Article 211) requires the Uganda Police Force to be nationalistic, patriotic, professional and disciplined. Figure 4.12 shows that 6 per cent of adult males with disabilities and 2 per cent of females with disabilities reported that the police had treated them unethically through acts such as coerced false confession, intimidation, false arrest, false imprisonment, falsification of evidence, brutality, corruption and unwarranted searches.

**FIGURE 4.12: PERSONS WITH DISABILITIES WHO HAVE BEEN TREATED UNFAIRLY BY THE POLICE (%)**
4.9 FREEDOM FROM EXPLOITATION, VIOLENCE AND ABUSE

In line with Article 16 of the CRPD, Uganda agreed to adopt appropriate legislative, administrative, social, educational and other measures to protect persons with disabilities from all forms of exploitation, violence and abuse.

4.9.1 FREEDOM FROM VIOLENCE AND ABUSE

The Constitution of Uganda (Article 17) states that one of the duties of a Ugandan citizen is to ‘protect children and other persons who need protection against any form of abuse or ill-treatment’. Article 42 of the Persons with Disabilities Act states in part that ‘no person shall in any manner subject a person with disability to torture, violence, abuse…’

The CRPD Committee was concerned about persons with disabilities (especially women, girls and boys with disabilities, and including deaf-blind women and children) who face physical and sexual violence both in family settings and in institutions.

Figure 4.13 shows that one in every four adults with psychosocial and/or intellectual disabilities have experienced sexual violence compared with those without psychosocial and/or intellectual disabilities (16%). About one in every four male and female persons with disabilities has experienced sexual violence. The findings reveal that persons with disabilities need extra protection from sexual violence.

**FIGURE 4.13: PERSONS WHO HAVE EXPERIENCED SEXUAL VIOLENCE (%)**

Map 2 shows that persons with psychosocial/intellectual disabilities in South Buganda (45%), West Nile (39%) and Bukedi (31%) experienced the highest percentage of sexual violence, while Busoga, Bugisu and Kampala sub-regions had the lowest rates (less than 10%).
MAP 2: PERSONS WITH PSYCHOSOCIAL/INTELLECTUAL DISABILITIES WHO HAVE EXPERIENCED SEXUAL VIOLENCE BY SUB-REGION (%)

Figure 4.14: Persons who have experienced physical violence (%)

- **Without psychological/intellectual disabilities**
  - Children: 34%
  - Adults: 47%

  - Adults: 54%
- **Female with disabilities**
  - Children: 35%
  - Adults: 48%
- **Male with disabilities**
  - Children: 39%
  - Adults: 51%
Figure 4.14 shows that 54 per cent of adults with psychosocial and/or intellectual disabilities have experienced physical violence compared with 47 per cent of those without psychosocial/intellectual disabilities. (From the age of 15 years they had been hit, slapped or kicked by someone, or something else had been done to hurt them physically.)

Map 3 shows that physical violence against adults with psychological or intellectual disabilities varies by region, with the highest percentages in West Nile (82%), Kigezi (75%) and North Buganda (75%).

**MAP 3: PERSONS WITH PSYCHOSOCIAL/INTELLECTUAL DISABILITIES WHO HAVE EXPERIENCED PHYSICAL VIOLENCE BY SUB-REGION (%)**
Figure 4.15 shows that two in every three males with disabilities had experienced either physical or sexual violence compared with one in every two females. The highest percentage was among those with psychosocial and or intellectual disabilities. It should be noted that experiencing such violence is not attributed to the psychosocial and or intellectual disabilities.

Irrespective of age, male persons with disabilities were more likely to have reported that they have ever experienced any form violence.

4.9.2 Freedom from Exploitation

The Persons with Disabilities Act (Article 42) states that no person shall in any manner exploit a person with disability. Figure 4.16 shows that about nine in every 10 children with disabilities and 7 in every 10 adults with disabilities had been victimized, implying that in the previous 12 months someone took or tried to take something from them by using or threatening to use force. There were, however, no significant differences by disability status, irrespective of age.
Although victimization happened to all persons irrespective of disability status, persons with disabilities had experienced it more frequently. They were more likely to have been victimized three or more times (33%) in the 12 months preceding the survey compared with persons without disabilities (21%) (Figure 4.17). This shows that persons with disabilities were more vulnerable to people taking or trying to take something from them by using force or threatening to use force.

**FIGURE 4.17: VICTIMIZED ADULTS BY NUMBER OF TIMES VICTIMIZED (%)**

![Bar chart showing the number of times victims were attacked by disability status.](image)

Figure 4.18 shows that while most persons were attacked in their homes, twice as many persons with disabilities (6%) were attacked while in public restaurants or bars or when using public transport than persons without disabilities (3%). Other attacks happened in other places such as the garden and water sources.

**FIGURE 4.18: ATTACKED PERSONS BY PLACE WHERE THE INCIDENT HAPPENED AND DISABILITY STATUS (%)**

![Bar chart showing the place of attacks by disability status.](image)
4.10 LIBERTY OF MOVEMENT AND NATIONALITY

Birth registration is every child’s fundamental right and according to Article 18 of the Constitution, every birth occurring in Uganda must be registered. Figure 4.19 shows that about three in every 10 children under 5 years of age had had their birth certified with no variation by disability status implying no discrimination by disability when registering children.

**FIGURE 4.19: CHILDREN UNDER 5 YEARS WHOSE BIRTHS HAD BEEN CERTIFIED, BY DISABILITY STATUS (%)**

4.11 EDUCATION

Uganda recognizes the right of persons with disabilities to education without discrimination and on the basis of equal opportunity as enshrined in the CRPD and the Persons with Disabilities Act. In order to realize this right, persons with disabilities are included in the general education system and are not excluded from the Universal Primary Education or the Universal Secondary Education programmes.

*Laroo Primary School teacher who is deaf in Gulu, northern Uganda teaches children who are deaf how to sign names of domestic animals and birds.* © UNICEF/UNI124709/Sibiloni in-house
The official school-going age for pre-primary is 3 to 5 years, primary level 6 to 12 years, lower secondary (‘O’ level) 13–16 years, upper secondary (‘A’ level) 17–18 years, and 19–24 years is for post-secondary and tertiary level.

The UFDS 2017 collected information about selected education characteristics for all persons aged 3 to 24 years but the focus for this report will be on the primary and lower secondary level in order to highlight some facts about school attendance by disability status. The results are shown in Table 4.8.

**TABLE 4.8: CHILDREN AGED 6–16 YEARS BY SCHOOL ATTENDANCE, TYPE OF SCHOOL ATTENDED AND SOURCE OF TUITION BY DISABILITY STATUS (%)**

</tr>
</tbody>
</table>

Table 4.8 shows that although there were minimal differences between males (81%) and females (80%) with disabilities who had ever attended school, there was a greater gender variation in the level of current school attendance. This could be an indication that more girls with disabilities are dropping out of school.

About 8 in every 10 children were attending government/public schools, irrespective of disability status. However, of those who attended private schools, there were slightly more children with disabilities compared with those without disabilities (25% and 18% respectively).

The major source of tuition was from government, irrespective of disability status. This could be the impact of Universal Primary Education and Universal Secondary Education being inclusive.

Figure 4.20 shows the current schooling status of children aged 6 to 16 years by school attendance and disability type. Children with visual impairments (87%) and those with psychosocial/intellectual (75%) were more likely to attend school, while those with self-care disabilities were least likely to attend school (17%).

The percentage of children with disabilities currently attending school was highest in Acholi sub-region (13%) (see Appendix Table A.6).
Because parental involvement in a child’s education is important, the UFDS 2017 sought information on whether there were any disparities in parental involvement between school-aged children by disability status. As Table 4.9 shows, generally there are no major disparities except that parents of children with disabilities are more likely to discuss their children’s special needs with their teachers compared with parents of those with no disabilities (44% and 30% respectively). With adequate training for special teachers and in-service training for current teachers in mainstream schools, schools will be more responsive to the special needs of children with disabilities and invite parents to discuss them. Currently, only nine per cent of parents said the school administration called them to discuss their children’s special needs. (See Appendix Table A.7 for regional variations.)

**Table 4.9: Children Aged 6–17 Years by Levels of Parental Involvement in Their Education by Disability Status and Place of Residence of Children with Disabilities (%)**
4.12 LIVELIHOOD PROGRAMMES

The UFDS 2017 asked household respondents’ questions about their knowledge of external economic development programmes provided by government or by non-governmental organizations such as religious, charitable and community-based organizations. Some programmes aim to help persons with disabilities to live independently in the community and cover support for assistive devices and other support such as guides, sign language interpreters and affordable skincare protection for persons with albinism.

Livelihood programmes in Uganda include: Operation Wealth Creation (OWC), the overall goal of which is to enhance household participation in commercial agricultural production; Social Assistance Grants for Empowerment (SAGE) – such as senior citizens grants, disability support grants and child support grants, and unemployment benefits – which aim to provide regular and reliable transfers of money to vulnerable or excluded citizens; the Youth Livelihood Programme (YLP), aimed at empowering youth in Uganda to harness their socio-economic potential and increase self-employment opportunities and income levels; the Women Entrepreneurship Programme (UWEP), a government initiative aimed at improving access to financial services for women and equipping them with skills for enterprise growth, value addition and marketing of their products and services; and the Special Grant for Persons with Disabilities, a social safety net to enable persons with disabilities to establish income-generating activities of their choice that can boost their incomes, and reduce inequality and unemployment.

Table 4.10 shows that overall half (52%) of the households surveyed are aware of a social transfer programme in Uganda. Operation Wealth Creation was the best known, with 85 per cent of households being aware of it and 14 per cent having benefited from it.

<table>

</tr>
</tbody>
</table>

Respondents were asked if they had tried to access social transfers from government or a non-governmental organization, either in cash or in kind, and if so what their experience had been. Table 4.11 shows that just over one in 10 adult person with disabilities (13%) had tried to access a social transfer and half (50%) felt they had been treated unfairly. On the other hand, 35 per cent felt they had received special treatment because of their disability and got the social transfer. For all those in need to benefit from the livelihood programmes, the level of unfair treatment needs to be addressed. (Appendix Table A8 gives the regional variations in terms of awareness and access to social grants.)

4.13 PERSONAL MOBILITY

The CRPD Committee has expressed concern about barriers hindering the personal mobility of persons with disabilities in Uganda. It has recommended that, in line with the Convention, the government’s draft rehabilitation and health-care policy on disability is speedily introduced and that the public budget to meet the mobility requirements of persons with disabilities is increased. This would go a long way in ensuring personal mobility with the greatest possible independence for persons with disabilities in Uganda.

Beatrice Adong 18 years, wears her prosthetic leg before going to school in Gulu district, Northern Uganda. She damaged her leg when she stepped on a landmine. © UNICEF/UNI140180/Sibiloni In-house

The UFDS 2017 asked parents of children aged 5 to 17 years who had difficulty in walking if they felt their children needed any assistive devices. As Figure 4.21 shows, three in every 10 need a wheelchair (32%) and nearly half (49%) need equipment such as an orthopedic shoe, crutch or artificial limb to help them walk upright.
When parents were asked if their children aged under five years had been assessed and recommended to use any equipment or assistance for walking, 38 per cent said that they had. As Figure 4.22 shows, for 30 per cent the assessment was carried out by staff at a health facility, for 43 per cent by a community health worker, and for 27 per cent by other persons such as a schoolteacher.
4.14 RESPECT FOR PRIVACY

Persons with disabilities have the same right to privacy in relation to their personal, health and rehabilitation information as others. However, a lack of regulation and professionalization means that the rights of people who have to use auxiliary services and aids can be infringed. Examples of this happening from the UFDS include the reading of private letters and listening into phone calls, and reading medical and criminal records, etc. When asked whether they had had their privacy infringed in a hospital or community setting, generally more males than females with disabilities reported that their privacy had not been respected. As Table 2.12 shows, the percentage increases with age.

| TABLE 4.12: PERSONS WITH DISABILITIES WHOSE PRIVACY WAS NOT RESPECTED (%) |
|------------------|---|---|---|
|                  | Male | Female | Total |
| Children 7–17 years | 3.9 | 3.1 | 3.6 |
| Children 10–17 years | 5.1 | 3.0 | 4.1 |
| Adults 18 plus years | 6.8 | 4.1 | 5.1 |

4.15 RESPECT FOR THE HOME AND FAMILY

Article 16 of the Universal Declaration of Human Rights states that everyone has the right to marry and found a family, and this is further reiterated in Uganda’s Persons with Disabilities Act (Article 36). The Act entitles persons with disabilities: to experience their sexuality and to have sexual and other intimate relationships from the age of 18 years; to marry a spouse of his or her own choice and found a family; and to equal rights at and in marriage, during marriage and at its dissolution. However, legislation – such as the Divorce Act (1904) and the Hindu Marriage and Divorce Act 1961 – infringes these rights. It has also been shown that marriage brings social benefits, including better health for both adults and children and cumulative wealth, and that it creates the social and economic conditions for effective parenting. The UFDS therefore asked all adults (aged 18 years and above) about their marital status. As seen in Table 4.13, 6 in every 10 adults were currently married (62%). Most had been married only once (75%), while a quarter (25%) had been in more than one marriage. More persons with disabilities compared with those without disabilities had been married more than once (29% compared with 22% respectively).

Among persons with disabilities, 58 per cent were married at the time of the interview, compared with 64 per cent of persons without disabilities. In addition, more persons with disabilities were in polygamous marriages (20%) compared with those without difficulties represented (15%).

| TABLE 4.13: ADULTS BY MARITAL STATUS AND DISABILITY STATUS (%) |
|------------------|---|---|---|
|                  | With a disability | Without a disability | Total |
| Currently married/Living with a partner | 58 | 64 | 62 |
| Widowed | 22 | 10 | 14 |
| Divorced/separated | 20 | 27 | 25 |
| In a polygamous marriage | 20 | 15 | 16 |
| Been married | | | |
| Once | 71 | 78 | 75 |
| More than once | 29 | 22 | 25 |

The UFDS 2017 also collected information on acts of discrimination against parents with disabilities. As the results in Figure 4.23 show, persons with psychosocial/intellectual disabilities are more likely to be discriminated against in their role as parents (9%), specifically by the negative behaviour of other parents, teachers, family members or health staff compared with little persons (4%) and persons with disabilities living in rural areas (6%).

**FIGURE 4.23: PERSONS WHO HAVE BEEN DISCRIMINATED AGAINST IN THEIR ROLE AS A PARENT (%)**

### 4.16 HEALTH

#### 4.16.1 SELECTED SELF-REPORTED CONDITIONS

The UFDS 2017 asked about selected health conditions that impair and limit participation in daily activities. These conditions were self-reported. Table 4.14 shows that rheumatism and spinal cord injury were the conditions most reported by adults, but were lower among children, with 1 in 5 adult persons with disabilities (197 persons per 1,000) suffering from rheumatism. This could be partly because some health conditions like rheumatism can contribute to disability. Adults with disabilities are 10 times more likely to report a spinal cord injury (140 per 1,000) compared with children with disabilities (11 per 1,000). This could be because older people are more likely to be exposed to accidents and other risks.

Epilepsy was the most reported health condition among children generally (16 per 1,000), and was even higher among children with disabilities (53 per 1,000). The following conditions were more reported among children with disabilities and less among adults: spina bifida, hydrocephalus, epilepsy, autism and Down’s syndrome.

4.16.2 HEALTH FACILITY DISCRIMINATION

Persons with disabilities were asked if they had faced unfair treatment when seeking help for physical health problems and if health workers had mistreated them. Table 4.15 shows that 9 per cent of persons with disabilities felt disrespected or humiliated by the treatment and behaviour of staff at health facilities and that 8 per cent of males and 7 per cent of females had been mistreated when seeking help for physical problems.

| Table 4.15: Adults with Disabilities who have been mistreated when seeking health care (%) |
|---------------------------------|-----------------|-----------------|
|                                | Male            | Female          | Total           |
| For physical health problems   | 8.3             | 7.2             | 7.7             |
| By health-care staff           | 9.3             | 8.1             | 8.7             |

Map 4 shows that Lango (18%), West Nile (15%), and South Buganda (13%) have the highest rates of persons with disabilities reporting mistreatment when seeking health care by health-care staff.

Map 4: Adults with Disabilities who have been mistreated by health-care staff by sub-region (%)
4.17 WORK AND EMPLOYMENT

Concern has been raised about the few employment opportunities available to persons with disabilities, particularly young men and women, and about persons who become disabled through an injury at work being dismissed. For this reason, the UFDS 2017 sought to establish how many persons with disabilities face discrimination in finding or keeping a job because they are disabled and because work places are not adapted to meet their needs.

Figure 4.24 shows that one-third of both males and females with disabilities felt they had been treated more positively than those without disabilities and that more males (26%) than females (21%) with disabilities had been treated unfairly in finding or keeping a job, including having been prevented from applying for work, and being dismissed without compensation after acquiring a disability. This may in part be because generally more men than women seek and are in paid employment.

FIGURE 4.24: ADULTS WITH DISABILITIES WHO HAVE FACED DISCRIMINATION IN WORK AND EMPLOYMENT (%)

4.18 ADEQUATE STANDARD OF LIVING AND SOCIAL PROTECTION

The UFDS sought to establish the proportion of persons with disabilities who are enrolled in relevant social protection and health insurance schemes that guarantee an adequate standard of living, and in compensation schemes to meet disability-related expenses such as for assistive devices, technology and personal assistance. Table 4.16 shows that health insurance coverage is generally low among both adults and children and there are no inequalities in acquiring health insurance by disability status among adults.

TABLE 4.16: PERSONS WITH HEALTH INSURANCE COVER AND DISABILITY STATUS (%)
4.19 PARTICIPATION IN CULTURAL LIFE, RECREATION, LEISURE AND SPORT

Table 4.17 shows that adults with disabilities were more likely to be discriminated against in relation to general social activities – such as socializing, hobbies, attending events and leisure activities – than by church members or leaders at their places of worship.

Female children with disabilities were most likely to have been discriminated against in the social aspects of life (16%), while among adults with disabilities the figure was highest among males (12%). Children aged 5 to 17 years were more affected by unfair treatment when participating in recreation, leisure and sports, probably because they participate in it more than adults. This discrimination can affect their emotional development greatly.

4.20 CHILDREN AGED 0–23 MONTHS WITH DISABILITIES

The UFDS 2017 collected information about whether children in their first stage of life (aged 0 to 23 months) had achieved certain development milestones for their current age. (Development milestones were used as a proxy for disability since measuring disability in children below two years of age is difficult in a household-based survey.)

Figure 4.25 shows that a child’s communication skills start out low and are then acquired between the ages of six and 15 months. After that, language development slows as the motor and social/emotional skills develop. The percentage of children who have not yet reached the motor and social/emotional development milestones is highest in the 10 to 12 month age group.

**FIGURE 4.25: CHILDREN AGED 0–23 MONTHS WHO FAILED TO ACHIEVE A DEVELOPMENT MILESTONE (%)**

4.21 SUBJECTIVE WELL-BEING

Life satisfaction is a measure of an individual’s perceived level of well-being. To assist respondents in answering a set of questions on their perceived level of happiness and well-being, respondents were shown an illustration and asked to score their level of satisfaction on a ladder ranging from 0 (worst possible life) to 10 (best possible life).

Figure 4.26 shows that in relation to life satisfaction, on average both male and female persons with disabilities scored 4, as did females without disabilities. Only males without disabilities had a higher score (5).
For the question on happiness, respondents were shown smileys of smiling and not-so-smiling faces corresponding to response categories ranging from ‘very happy’ to ‘very unhappy’ (see the adult questionnaire in the Appendix to this report). Table 4.18 shows that persons with disabilities are twice (36%) as likely to consider themselves happy than those without disabilities (17%) but that gender variations exist, with slightly more females with disabilities (37%) than males (34%) being happy.

Perception of a better life refers to a feeling that life had improved compared to the previous year and was expected to be better the following year. Table 4.18 shows that more persons without disabilities (55%) perceive their lives to be better than persons with disabilities (39%), and that generally females perceive their lives to be better than males.

4.22 SUMMARY OF KEY FINDINGS

Disability prevalence rate
- 3.5 per cent (children 2–4 years)
- 7.5 per cent (children 5–17 years)
- 16.5 per cent (adults 18 years and over).

Of those children aged 5–17 years with functional difficulties using assistive devices:
- 0.3 per cent use glasses/contact lenses
- 0.1 per cent use hearing aids
- 0.5 per cent use equipment/assistance for walking

Empowerment and promotion of social inclusion
- 0.9 per cent of persons with disabilities and 2.2 per cent of persons without disabilities own a mobile phone
- 36 per cent of persons with disabilities and 51 per cent of persons without disabilities had used the internet at least once a week during the three preceding months

Health insurance
- 1.2 per cent of adults (18+) with disabilities had health insurance
- 0.6 per cent of children aged 5–17 years had health insurance
- 0.4 per cent of children aged 2–4 years had health insurance
- 52 per cent of households were aware of economic assistance programmes
- 4 per cent of households had received external economic support

School support programmes for school-going 6–16-year-old children
- 19 per cent of children with disabilities received support for tuition and other school-related activities
- 18 per cent of children without disabilities received support for tuition and other school-related activities

Discrimination or harassment experienced in the previous 12 months
- 17 per cent of adult males with disabilities
- 12 per cent of adult females
- 19 per cent of female children (5–17 years)
- 13 per cent of male children (5–17 years)

Physical and/or sexual violence against females with disabilities
- 58 per cent of female adults had experienced sexual violence
- 36 per cent of female children (5–17 years) had experienced sexual violence

Birth registration
- 33 per cent of all children under five were registered and had birth certificates (the percentage is the same among those with and without disabilities)

Happiness and life satisfaction
- 36 per cent of adults with disabilities and 17 per cent without disabilities said they were happy
- 55 per cent of adults without disabilities and 39 per cent of persons with disabilities perceived life to be better than it had been a year earlier
15-year-old Namugga Veronica is moved in to a locally made wheelchair by her older brother at their house in Kayunga district, Central Uganda.
CONCLUSION AND RECOMMENDATIONS

The findings of the UFDS 2017 quantify and generally show that persons with disabilities are discriminated against in various aspects of life as highlighted in the concluding observations in Uganda’s initial report to the CRPD. Based on this information, the following recommendations have been drawn up:

1. **Intensify mass sensitization on accident management and the prevention of childhood illnesses**

   Sensitizing individuals on how to prevent and avoid accidents would reduce the number of persons with disabilities in Uganda. Prevention and early treatment of childhood diseases such as malaria and measles reduces the risk of children becoming disabled, as does the diagnosis and correction of functional difficulties in early childhood.
2. **Ensure that persons with disabilities can access assistive devices**

   Measures should be put in place to provide assistive devices to persons with disabilities to overcome environmental barriers and enable them to perform their day-to-day activities without difficulty.

3. **Conduct research studies on children with disabilities and provide training and resources to health services**

   More research is needed to find out what causes the disabilities and disabling conditions that affect children. This could be done through a cohort study of children with disabilities. Additional facilities and medical specialists should be put in place to prevent disability, especially among children.

4. **Guarantee accessibility to services and work**

   Workplaces and public spaces such as health facilities and schools should be adapted to enable equal access. Measures include lifts in buildings, walking lanes other than stairs, sitting toilets other than squatting ones, appropriate chairs, and appropriate information and communication technologies.

5. **Carry out mass sensitization campaigns to change the attitudes of service providers**

   Service providers such as health workers, teachers and bank staff should be sensitized to avoid stigma and discrimination against persons with disabilities.

6. **Implement/enforce policies and laws that promote employment for persons with disabilities**

   Labour policies that advocate for persons with disabilities or those who acquire disabilities while at work should be strengthened and implemented to reduce workplace discrimination. Recommendations and offers of work should be based on a person's ability to perform the task, not on his or her appearance.

7. **Sensitize and mobilize persons with disabilities to increase their access to government livelihood programmes**

   In order to increase the low take-up of funds by persons with disabilities, many of whom are unaware that such programmes exist, and to ensure that transfers go to the right people, local leaders (those who implement the projects/social transfers) should inform communities, especially persons with disabilities, about their rights and how to obtain funds.

   Social, cultural and religious institutions (churches, schools, leisure parks) should be encouraged to spearhead advocacy for equal opportunities irrespective of disability status.

8. **Provide psychosocial support to persons with disabilities, especially children, to avoid the adverse effects of disability**

   Children with disabilities should be counselled and reassured that they have the same rights as other children and encouraged to realize their potential. Children and adults without disabilities should be informed about the challenges faced by people with disabilities and their strengths, and encouraged to treat them fairly.

9. **Build the capacity of mothers and caretakers to detect disabilities early and prevent early childhood illnesses**

   Mothers and caretakers of children below the age of 2 years should be educated on the development milestones for each age in order to monitor whether their children are growing normally and detect early childhood disabilities. Mothers should be supported and taught how to prevent diseases like hydrocephalus and how to care for children suffering from them.

   In summary, all persons with disabilities should be appreciated and treated with dignity. Awareness raising, sensitization and community mobilization would enable them to explore their abilities and realize their potential. Such measures would enable persons with disabilities and those without disabilities to contribute to Uganda’s development on an equal basis.

APPENDICES
A.1 NATIONAL LAWS AND POLICIES IN UGANDA

Other laws and policies that provide for disability statistics, rights and inclusion include:

- The Access to Information Act, 2005;
- The Building Control Act, 2013;
- The Business, Technical, Vocational Education and Training (BTVET) Act, No. 12, 2008;
- The children's act and statute 1996 (amendment 2016);
- The copyright and other neighbouring rights Act, 2006;
- The land Act, 1998;
- The local government Act 1997 (amendments 2001 and 2013);
- The Parliamentary elections Act 2005;
- The penal code Act, 2007;
- The presidential Elections Act, 2010;
- The Prisons Act, 2006;
- The Public Finance Management Act, 2015;
- The Traffic and road safety Act, 1998 (with amendments 2013 and 2018);
- The Uganda Communications Act, 2013;
- The Uganda Foundation for the Blind Act, 1968 (amendment 1973);
- The Uganda National Institute of Special Education (UNISE) Act 1998;
- The universal primary education Act, 1997;
- The universities and other tertiary institutions Act, 2001 and;
- The Workers’ Compensation Act, 2000;

The additional policies that directly and/or indirectly address the disability cause include:

- National action plan on elimination of the worst forms of child labour in Uganda 2012/13 - 2016/17;
- Vision 2040;
- National Employment policy, 2011;
- National Functional Adult Literacy policy, 2015;
- National Health policy, 2015;
- National Integrated Early Childhood Policy, 2016;
- National Social Protection policy, 2015;
- National strategic programme plan of interventions for orphans and other vulnerable children 2011/12—2015/16;
- NRM-O Presidential 2016;

**QUESTIONNAIRES**

**UGANDA BUREAU OF STATISTICS**

**HOUSEHOLD QUESTIONNAIRE**

2017 Uganda Functional Difficulties Survey

---

**HOUSEHOLD INFORMATION PANEL**

<table>
<thead>
<tr>
<th>HH</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>HH1. Cluster number: ________________</td>
<td>HH2. Household number: ________________</td>
</tr>
<tr>
<td>HH3. Interviewer’s name and number: _____ NAME __________________</td>
<td>HH4. Supervisor’s name and number: NAME __________________</td>
</tr>
<tr>
<td>HH5. Day / Month / Year of interview: ___ <em><strong>/</strong></em> _<strong>/ 201</strong></td>
<td>HH5. Is the household selected for question testing? YES 1 NO 2</td>
</tr>
</tbody>
</table>

Check that the respondent is a knowledgeable member of the household and at least 18 years old before proceeding. You may only interview a child age 15-17 if there is no adult member of the household or all adult members are incapacitated. You may not interview a child under age 15.

**HH12.** Hello, my name is (your name). We are from UGANDA BUREAU OF STATISTICS. We are conducting a survey about the situation of persons, families and households with persons with a functional difficulty in any body part. I would like to talk to you about these subjects. This interview usually takes about 15 minutes. Following this, I may ask to conduct additional interviews with you or other individual members of your household. All the information we obtain will remain strictly confidential and anonymous. If you do not wish to answer a question or stop the interview, please let me know. May I start now?

<table>
<thead>
<tr>
<th>YES, PERMISSION IS GIVEN 1</th>
<th>NO, PERMISSION IS NOT GIVEN 2</th>

**HH46. Result of Household Questionnaire interview:**

Discuss any result not completed with Supervisor.

| COMPLETED 01 |
| NO HOUSEHOLD MEMBER AT HOME OR NO COMPETENT |
| RESPONDENT AT HOME AT TIME OF VISIT 02 |
| ENTIRE HOUSEHOLD ABSENT FOR EXTENDED PERIOD OF TIME 03 |
| REFUSED 04 |
| DWELLING VACANT 05 |
| DWELLING DESTROYED 06 |
| OTHER (specify) 96 |

**HH47.** Name and line number of the respondent to Household Questionnaire interview:

| NAME __________________ |

---

---
**LIST OF HOUSEHOLD MEMBERS**

First complete HL2 for all members of the household. Then proceed with HL3 and HL4 vertically. Once HL2-HL4 are complete for all members, make sure to probe for additional members: Those that are not currently at home, any infants or small children and any others who may not be family (such as servants, friends) but who usually live in the household.

Then, ask questions HL5-HL20 for each member one at a time. If additional questionnaires are used, indicate by ticking this box:

<tr>
<td>WM3. Name and line number:</td>
<td>NAME ________</td>
</tr>
<tr>
<td>WM4. Supervisor's name and number:</td>
<td>NAME ________</td>
</tr>
<tr>
<td>WM5. Interviewer's name and number:</td>
<td>NAME ________</td>
</tr>
<tr>
<td>WM6. Day / Month / Year of interview:</td>
<td>____ / ____ / 201 ____</td>
</tr>
<tr>
<td>WM7. Check completed questionnaires in this household:</td>
<td>YES, INTERVIEWED ALREADY 1</td>
</tr>
<tr>
<td>WM9A. Hello, my name is (your name). We are from Uganda Bureau of Statistics. We are conducting a survey about the situation of children, families and households. I would like to talk to you about your health and other topics. This interview usually takes about 15-20 minutes. We are also interviewing mothers about their children. All the information we obtain will remain strictly confidential and anonymous. If you wish not to answer a question or wish to stop the interview, please let me know. May I start now?</td>
<td>YES, PERMISSION IS GIVEN 1</td>
</tr>
<tr>
<td>WM9B. Now I would like to talk to you about your health and other topics in more detail. This interview will take about 15-20 minutes. Again, all the information we obtain will remain strictly confidential and anonymous. If you wish not to answer a question or wish to stop the interview, please let me know. May I start now?</td>
<td>YES, PERMISSION IS GIVEN 1</td>
</tr>
<tr>
<td>WM17. Result of individual's interview. Discuss any result not completed with Supervisor.</td>
<td>COMPLETED 01</td>
</tr>
<tr>
<td></td>
<td>NOT AT HOME 02</td>
</tr>
<tr>
<td></td>
<td>REFUSED 03</td>
</tr>
<tr>
<td></td>
<td>PARTLY COMPLETED 04</td>
</tr>
<tr>
<td></td>
<td>INCAPACITATED (specify) 05</td>
</tr>
<tr>
<td></td>
<td>NO ADULT CONSENT FOR RESPONDENT AGE 15-17 06</td>
</tr>
<tr>
<td></td>
<td>OTHER (specify) 96</td>
</tr>
</tbody>
</table>

**Notes:**

- WM9B. If the interview is for children under 15-17, please specify the age in years.
- WM17. The result should be discussed with the supervisor.
- WM7. Use 'YES, INTERVIEWED ALREADY 1' or 'NO, FIRST INTERVIEW 2' depending on whether the respondent has been interviewed before.
- WM9A. Ensure confidentiality and anonymity are emphasized.
- WM9B. Specify the duration of each interview to maintain consistency.
- WM17. Document any incomplete results and discuss them with the supervisor.

### INDIVIDUAL’S BACKGROUND

| WB18. Are you covered by any health insurance? | YES | 1 |
| NO | 2 |
| WB 19. OBSERVE: Is the woman/man an albino? | YES | 1 |
| NO | 2 |
| DK / NOT SURE | 8 |
| WB 20. OBSERVE: Is the woman/man a little person? | YES | 1 |
| NO | 2 |
| DK / NOT SURE | 8 |

### MASS MEDIA AND ICT

| MT4. Have you ever used a computer or a tablet from any location? | YES | 1 |
| NO | 2 |
| MT5. During the last 3 months, did you use a computer or a tablet at least once a week, less than once a week or not at all? |
| NOT AT ALL | 0 |
| LESS THAN ONCE A WEEK | 1 |
| AT LEAST ONCE A WEEK | 2 |
| ALMOST EVERY DAY | 3 |
| MT9. Have you ever used the internet from any location and any device? | YES | 1 |
| NO | 2 |
| MT10. During the last 3 months did you use the internet at least once a week, less than once a week or not at all? |
| NOT AT ALL | 0 |
| LESS THAN ONCE A WEEK | 1 |
| AT LEAST ONCE A WEEK | 2 |
| ALMOST EVERY DAY | 3 |
| MT11. Do you own a mobile phone? | YES | 1 |
| NO | 2 |
**VICTIMISATION**

**VT1. Check for the presence of others. Before continuing, ensure privacy:** Now I would like to ask you some questions about crimes in which you personally were the victim.

Let me assure you again that the information you supply will remain strictly confidential.

In the last three years, that is since *(month of interview) 2014*, has anyone taken or tried taking something from you, by using force or threatening to use force?

*Include only incidents in which the respondent was personally the victim and exclude incidents experienced only by other members of the household.*

*If necessary, help the respondent to establish the recall period and make sure that you allow adequate time for the recall. You may reassure: It can be difficult to remember this sort of incidents, so please take your time while you think about your answers.*

</table>

Check respondent’s age in HL6 in List of Household Members, Household Questionnaire:

If age 15-17, verify that adult consent for interview is obtained (HH33 or HH39) or not necessary (HL20=90). If consent is needed and not obtained, the interview must not commence and ‘06’ should be circled in FS17. The respondent must be at least 15 years old. In the very few cases where a child age 15-17 has no mother or caretaker identified in the household (HL20=90), the respondent will be the child him/herself.

**FS9.** Check completed questionnaires in this household: Have you or another member of your team interviewed this respondent for another questionnaire?

YES, interviewed already 1
NO, First Interview 2

**FS10A.** Hello, my name is (your name). We are from **UGANDA BUREAU OF STATISTICS.** We are conducting a survey about the situation of children, families and households. I would like to talk to you about (child’s name from FS3)’s health and well-being. This interview will take about 10-15 minutes. All the information we obtain will remain strictly confidential and anonymous. If you wish not to answer a question or wish to stop the interview, please let me know. May I start now?

Yes, permission is given 1
No, permission is not given 2

**FS10B.** Now I would like to talk to you about (child’s name from FS3)’s health and well-being in more detail. This interview will take about 15 minutes. Again, all the information we obtain will remain strictly confidential and anonymous. If you wish not to answer a question or wish to stop the interview, please let me know. May I start now?

Yes, permission is given 1
No, permission is not given 2

**FS17.** Result of interview for child age 5-17 years

</tbody>
</table>

Let me assure you again that the information you supply will remain strictly confidential.

In the last three years, that is since (month of interview) 2014, has anyone taken or tried taking something from you, by using force or threatening to use force?

*Include only incidents in which the respondent was personally the victim and exclude incidents experienced only by other members of the household.*

*If necessary, help the respondent to establish the recall period and make sure that you allow adequate time for the recall.*

*You may reassure: It can be difficult to remember this sort of incidents, so please take your time while you think about your answers.*

### UNDER-FIVE’S BACKGROUND

**UB1.** On what day, month and year was (name) born?

*Probe:* What is (his/her) birthday?

If the mother/caretaker knows the exact date of birth, also record the day; otherwise, circle ‘98’ for day.

Month and year must be recorded.

| DATE OF BIRTH DAY | ___ ___ |
| DK DAY | 98 |
| MONTH | ___ ___ |
| YEAR | 2 0 1 ___ |

**UB2.** How old is (name)?

*Probe:* How old was (name) at (his/her) last birthday?

Record age in completed years.

Record in months if less than 2 years old.

*If responses to UB1 and UB2 are inconsistent, probe further and correct.*

| MONTHS | …………………………2 |
| YEARS | …………………………3 |

**UB9.** Is (name) covered by any health insurance?

| YES | 1 |
| NO | 2 |

### REQUEST TO SEE THE CHILD AND OBSERVE THE CHILD IF AVAILABLE

**UB10. OBSERVE:** Is the child an albino?

| YES | 1 |
| NO | 2 |
| CHILD NOT AROUND | 3 |
| DK / NOT SURE | 8 |

**UB11. OBSERVE:** Is the child a little Person?

| YES | 1 |
| NO | 2 |
| CHILD NOT AROUND | 3 |
| DK / NOT SURE | 8 |

**UB12.** Does (name) have a birth certificate?

<p>| HAS SHORT CERTIFICATE | 1 |
| HAS LONG CERTIFICATE, SEEN | 2 |
| REGISTERED, NOT SEEN | 3 |
| NOT REGISTERED | 4 |
| DK / NOT SURE | 8 |</p>

**UCF5.** In the following questions, I will ask you to answer by selecting one of four possible answers. For each question, would you say that (name) has: 1) no difficulty, 2) some difficulty, 3) a lot of difficulty, or 4) that (he/she) cannot at all. Repeat the categories during the individual questions whenever the respondent does not use an answer category. Remember the four possible answers: Would you say that (name) has: 1) no difficulty, 2) some difficulty, 3) a lot of difficulty, or 4) that (he/she) cannot at all?
