

UGANDA BUREAU OF STATISTICS

We are Evidence Based

THE REPUBLIC OF UGANDA

THE NATIONAL STANDARD INDICATOR FRAMEWORK (NSI) LEVEL I & II

NOVEMBER 2023

PREFACE

Uganda Launched its vision 2040 with an aim, of “A Transformed Ugandan Society from a peasant to a modern and prosperous country within 30 years” and is being implemented through five year rolling National Development Plans which are in alignment with the regional (EAC), continental (Africa Agenda 2063) and global (2030 Agenda). To achieve the goals and objectives of these agenda, there is need to track progress of agreed indicators there in hence the need for a designated monitoring and reporting strategy. The Uganda Bureau of Statistics (UBOS), National Planning Authority (NPA) Office of the Prime Minister (OPM) and the Ministry of Finance, Planning and Economic Development (MoFPED), therefore developed the National Standard Indicator (NSI) Framework to guide Ministries, Departments and Agencies in the production and dissemination of demand driven statistics to ease monitoring and reporting.

The framework has four levels; Level I; tracks the country’s graduation from LDC to Medium-Income Country, Level II tracks progress towards realization of the NDP III Goal, Objectives and Key Result Areas, Level III measures progress towards realization of the NDP III programme objectives and outcomes and Level tracks implementation of the Programme Implementation Action Plans (PIAPs) in Ministries, Departments and Agencies (MDAs).

The Uganda Bureau of Statistics updates the NSI Framework on a quarterly basis with inputs from Ministries, Departments and Agencies (MDAs). This publication provides updated data series for Levels I and II of the NSI Framework as well as the indicator definitions and methods of computation to enhance understanding and uptake of the indicators. The Bureau will continue to support and work with MDAs to articulate and publish Levels III and IV of the NSI Framework in subsequent publications of the NSI Framework.

I take this opportunity to thank the NPA, OPM and MoFPED for their support towards developing the NSI Framework and also appreciate continuous effort by MDAs for regularly providing data series to facilitate the update of the NSI Framework

For God and My Country

GUIDING NOTES

The following are guiding notes to the reader;

- i) The NSI is a framework which is contributed to by all players in the NSS.
- ii) This document is part of the NSI and comprises of NSI level I and II.
- iii) Level I present indicators that measure Graduation to the Middle-Income status of the country, and these indicators are provided by United Nations Department of Economic and Social Affairs (UNDESA). All of the Level I indicators are measured at national level and data is usually extracted from the periodic survey reports carried out by Uganda Bureau of Statistics (UBOS). These surveys are carried out after a specified period of time usually one, three or five years. This is the reason some indicators will remain constant for some financial years.
- iv) Level II presents indicators from the NDP III Results Reporting Framework (RRF) for the Goal, Objectives and Key Result Area Level Indicators

NB: Some indicators don't have data points for some FYs because no data was documented within that period, some surveys are still being carried out and some producers are still compiling data.

1.0 INTRODUCTION

The Government of Uganda is committed to fulfillment of the requirements of different International, Continental, Regional and national development frameworks. These frameworks include, but are not limited to the: Agenda 2030 for Sustainable Development under the notion “Living No One Behind”, African Agenda 2063 which is "A global strategy to optimize use of Africa's resources for the benefit of all Africans", the East African Community Integration Protocols and at national level, the government strives to achieve Vision 2040, to “Transform the Ugandan society from peasant to a modern prosperous country within 30 years” and which is operationalized through implementation of a series of National Development Plans (NDPs).

Under the leadership of the National Planning Authority (NPA), the development frameworks are incorporated in the NDP and a comprehensive NDP Results and Reporting Framework (NDP RRF) is produced. The NDP RRF provides a set of indicators and statistical needs that guide NDP target setting, monitoring and evaluation processes, planning and financing under the Ministry of Finance, Planning and Economic Development (MoFPED)'s Programme Based Budget System (PBBS) and the evidence based performance measurement requirements of the Office of the Prime Minister (OPM) especially through the Government Annual Performance Reviews (GAPR). In addition to the NDP RRF, government has ratified various international and regional Conventions, Treaties and Protocols including the 2011 Istanbul Plan of Action that focuses on the Uganda's Graduation to a Middle Income Country (MDC) and present a set of indicators to track progress.

Cognizant of these data and statistical requirements, the Government of Uganda through a quadripartite arrangement involving the Uganda Bureau of Statistics, Ministry of Finance, Planning and Economic Development, National Planning Authority and the Office of the Prime Minister developed the National Standard Indicators (NSI) Framework to guide Ministries, Departments and Agencies in statistical production.

2.0 RATIONALE OF THE NSI FRAMEWORK

Recommendations of the evaluations of the first National Development Plan (NDP I) and Plan for National Statistical Development (PNSD I) revealed inconsistencies, incomparability and gaps in the data and indicators produced and submitted by MDAs to the oversight agencies of such as NPA, MoFPED and OPM. The evaluations further underlined the need to define a national set of indicators to address the challenge and facilitate evidence based planning, budgeting, resource allocation and performance measurement for various government programmes.

In line with this, the Government of Uganda through a quadripartite arrangement involving the Uganda Bureau of Statistics, Ministry of Finance, Planning and Economic Development, National Planning Authority and the Office of the Prime Minister embraced the concept of a National Standard Indicators Framework (NSI) to track progress towards achieving the National Development Priorities as well as commitments to International, Continental and Regional development frameworks. The NSI Framework presents indicators in a hierarchical manner. The NSI Framework therefore:

1. Provides a statistical planning framework for National Statistical System
2. Ensures alignment of the national statistical production programmes to different development agenda
3. Ensures a holistic, harmonised and well-coordinated process for producing data and statistics for international, national and Institutional reporting.
4. Reduces reporting fatigue by MDAs to oversight institutions such MOFPED, NPA, Office of the President (OP) and OPM as well as development partners and international agencies.
5. Minimises duplication of efforts in the production and management of statistics in the NSS.

3.0. STRUCTURE OF NSI FRAMEWORK

The NSI Framework is hierarchical and has 4 levels. Level I presents indicators that guide in measures Uganda's graduation to middle income country, Level II measures progress towards realization of the NDP III Goal, Objectives and Key Results Areas, Level III measures the performance of the NDP III programmes and Level IV measures progress towards implementing Programme Implementation Action Plans in Ministries, Departments and Agencies.

3.1 Graduation to Middle Income Country

Level I of the NSI Framework presents key indicators that track monitoring of the country's graduation from LDC to Medium-Income Country. These indicators are defined by the United Nations Department for Economic and Social Affairs. The graduation follows three sets of criteria namely:

1. Income Criterion (IC), this serves as a measure of income and the overall level of resources available to a country based on a three-year average estimate of Gross National Income (GNI) per capita. The inclusion threshold is set at the three-year average of the level of GNI per capita, which the World Bank defines for identifying low-income countries. The graduation threshold is set at 20 per cent above the inclusion threshold. The following are some of the indicators in the NSI that feed into this criterion; GDP per capita, GDP growth rate, GDP, proportion of population below the National Poverty line, GNI coefficient, and labor productivity.
2. Human Assets Index (HAI) is a measure of the level of human capital. Low levels of human capital are major structural impediments, not only because they are a manifestation of unsustainable development, but also because they limit the possibilities for production and economic growth, limit poverty eradication, exacerbate inequalities and hamper resilience to external shocks. This is measured based on indicators of: (a) nutrition: percentage of population undernourished; (b) health: mortality rate for children aged five years or under; (c) education: the gross secondary school enrolment ratio; and (d) adult literacy rate.
3. Economic Vulnerability Index (EVI), measures the structural vulnerability of the country to economic and environmental shocks. High vulnerability is a major impediment to sustainable development in view of heightened exposure to shocks and their long-lasting negative impacts. The measure is based on indicators of: (a) population size; (b) remoteness; (c) merchandise export concentration; (d) share of agriculture, forestry and fisheries; (e) share of population in low elevated coastal zones; (f) instability of exports; (g) victims of natural disasters; and (h) instability of agricultural production.

Table 1: Summary of the Number of Indicators under Level one

LEVEL 1: National Graduation to Lower Middle-Income Status	
Graduation Criterion	Number Of Indicators
Graduation Criterion1: Income	10
Graduation Criterion 2: Human Assets	25
Graduation Criterion 3: Economic Vulnerability	16
Total	51

3.2 Level II: NDP III Goal, Objectives and Key Result Area Indicators

Level II of the NSI Framework presents indicators from the NDP III RRF that facilitates tracking progress towards realization of the NDP III Goal, Objectives and Key Result Areas. The NDP III Goal of “Increasing Household Incomes and Improving the Quality of Life of Ugandans”. The NDP III has five (5) objectives namely:

1. Enhance value addition in Key Growth Opportunities
2. Strengthen private sector capacity to drive growth and create jobs
3. Consolidate & increase stock and quality of Productive Infrastructure
4. Increase productivity and wellbeing of Population
5. Strengthen the role of the State in development

In addition, relevant SDG Indicators, Africa Agenda 2063 Indicators, EAC Vision 2050 Indicators as well as Uganda Vision 2040 Indicators are incorporated in this level.

Table 2: Summary of the Number of Indicators under Level II

LEVEL 2: GOAL, OBJECTIVES AND KEY RESULTS AREAS OF THE NATIONAL DEVELOPMENT PLAN (NDP III)	
Category	NSI LEVEL II INDICATORS PER CATEGORY
Goal: Increased household incomes and improved Quality of life	22
Objective 1: Enhance value addition in Key Growth Opportunities	16
Objective 2: Strengthen private sector capacity to drive growth and create jobs	7
Objective 3: Consolidate & increase stock and quality of Productive Infrastructure	36
Objective 4: Increase productivity and wellbeing of Population	49
Objective 5: Strengthen the role of the State in development	10
TOTAL	140

3.3 Level III: NDP III Programme Indicators

The NDP III adopted the programme approach to planning. Level III of the NSI Framework presents indicators that measure progress towards realization of the NDP III programme objectives and outcomes. The NDP III has 20 programmes namely:

1. Agro-Industrialization
2. Mineral Development
3. Sustainable Petroleum Development
4. Tourism Development
5. Natural Resource, Environment, Climate Change, Land and Water Resources Management
6. Private Sector Development
7. Manufacturing
8. Integrated transport infrastructure and services
9. Sustainable Energy Development
10. Digital Transformation
11. Sustainable Urbanization and Housing
12. Human Capital Development
13. Innovation, Technology Development and Transfer
14. Community Mobilization and Mindset Change
15. Governance and Security
16. Public Sector Transformation
17. Regional Balanced Development
18. Development Plan Implementation
19. Administration of Justice
20. Legislation, Oversight and Representation

Similar to level I, the relevant SDG Indicators, Africa Agenda 2063 Indicators, EAC Vision 2050 Indicators as well as Uganda Vision 2040 Indicators are incorporated across the 20 programmes.

3.4 Level IV: NDP III Programme Implementation Action Plans

Level IV of the NSI Framework provides indicators that track implementation of the Programme Implementation Action Plans (PIAPs) in Ministries, Departments and Agencies. These are mainly output indicators and intermediate outcome indicators.

4.0. NSI LEVEL ONE: CRITERIA FOR GRADUATION TO MIDDLE INCOME COUNTRY INDICATORS

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodicity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
Graduation Criterion 1: Income														
1.1. Gross National Income (GNI) per capita														
1.1.1: GDP Per Capita (US\$), Current Prices	US\$	National Accounts	Annual	926	808	824	855	889	916	957	1042	UBOS	This is the total value of goods and services priced in the current year of reporting per the total population	GDP per capita is the sum of the total value of gross value added on goods and services priced by all resident producers in the economy plus any product taxes (less subsidies) not included in the valuation of output, divided by mid-year population.
1.1.2: GDP Growth Rate (%)	Percent	National Accounts	Annual	5.2	4.8	3.1	6.3	6.4	3	3.5	4.7	UBOS	This is the percentage change in the real GDP between two consecutive years	Growth rate of real GDP in year t: $(G(t)/G(t-1)-1) \times 100$, where G(t) is real GDP per capita in year t and G(t-1) is real GDP per capita in year t-1.
1.1.3: GDP at current Market prices	Billion UGX	National Accounts	Annual	91,582	100,549	108,518	120,485	132,090	139,689	148,310	162,721	UBOS	This is the sum of gross values added plus taxes less subsidies on products as measured in current prices.	Gross output (GO) and intermediate consumption (IC) are measured in current prices; plus, any taxes less subsidies on products. Gross value added is the difference between GO and IC.
1.1.4: Proportion of Population below the National Poverty Line	Percent	UNHS	Every 3 years	19.7	19.7	21.4	21.4	21.4	20.3	20.3	20.3	UBOS	percentage of the population leaving on less than \$1 a day	Computed as the Persons living on less than US\$ 1.00 a day over Total Household Population divide by 100
1.1.5: Income distribution (GINI Coefficient)	Coefficient	UNHS	Every 3 years	0.395	0.395	0.42	0.42	0.42	0.413	0.413	0.413	UBOS	This is the measure of inequality in household consumptions per adult equivalent.	Summation of household expenditures per decile divided by the number of households in the decile
E1.1.6: US\$ Labour	US\$	NLFS	Annual	2,786	na	2,692	2,692	2,692				UBOS	This is the value added per worker as a	Real output (Deflated GDP measured in chain-linked

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodic ity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
Productivity Per Worker – Total													measure of productivity	volumes) per unit of Labour input (Measured by the Total number of hours worked) in the given sector
1.1.7: US\$ Labour Productivity Per Worker – Agriculture	US\$	NLFS	Annual	794	na	829	829	829	977.7	710		UBOS	This is the agriculture value added per worker as a measure of agricultural productivity	Real output (Deflated GDP measured in chain-linked volumes) per unit of Labour input (Measured by the Total number of hours worked) in the agriculture sector
1.1.8: Sector Composition of GDP (%)														
a) Agriculture, Forestry and Fisheries	Percent	National Accounts	Annual	23.5	22.7	23.5	23.3	22.9	23.9	23.8	24.1	UBOS	This is the sum of gross values added of all Agricultural, Forestry and Fisheries (Food crops) products prices less subsidies on imports plus all non-deductible value added taxes or similar taxes	Summation of gross values added of all Agriculture, Forestry and Fisheries (Food crops) producers' prices less subsidies on imports plus all non-deductible value added taxes or similar taxes
i. Cash Crops	Percent	National Accounts	Annual	2.0	2.1	2.4	2.2	2.0	2.0	2.1	2.8	UBOS		
ii. Food Crops	Percent	National Accounts	Annual	12.3	11.5	12.3	12.4	11.5	11.6	11.5	11.4	UBOS		
iii. Livestock	Percent	National Accounts	Annual	3.1	3.0	3.0	3.2	3.4	3.8	3.9	4.0	UBOS		
iv. Forestry	Percent	National Accounts	Annual	3.8	3.8	3.7	3.8	3.8	4.1	4.1	3.9	UBOS		
v. Fisheries	Percent	National Accounts	Annual	2.2	2.2	2.0	1.6	2.2	2.5	2.3	2.0	UBOS		
b) Manufacturing	Percent	National Accounts	Annual	17.6	16.2	15.5	15.8	15.5	15.8	16.4	16.4	UBOS		
C) Services	Percent	National Accounts	Annual	43.3	44.4	43.5	43.3	43.0	42.8	41.8	41.6	UBOS		

Graduation Criterion 2: Human Assets

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodic ity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
2.1: Adult Literacy Rate														
2.1.1: Literacy Rate (10 Yrs.+) - Total	Percent	UNHS	Every 3 years	71	71	73.5	73.5	73.5	76.1	76.1	76.1	UBOS		
i Male	Percent	UNHS	Every 3 years	77	77	77.5	77.5	77.5	80.8	80.8	80.8	UBOS	The number of males aged 10 years and above who are able to read and write with understanding in any language	Divide the number of males aged 10 years and above who are literate by the total population in that same age group and multiply the result by 100
ii Female	Percent	UNHS	Every 3 years	65	65	69.9	69.9	69.9	71.8	71.8	71.8	UBOS	The number of females aged 10 years and above who are literate by the total population in that same age group and multiply the result by 100	Divide the number of females aged 10 years and above who are literate by the total population in that same age group and multiply the result by 100
2.1.2 Average years of schooling	Number	UNHS	Every 3 years	na	Na	4.5	4.5	4.5	4.5	4.5	4.5	MOES	The average number of completed years of education of a population.	The sum of the age specific enrolment ratios for primary, secondary, post-secondary non tertiary and tertiary education
3.1: Gross School Enrolment														
3.1.1: Gross Enrolment Ratio*														
a): Primary	Ratio	UNHS	Every 3 years	129	129	116.8	116.8	116.8	118	118	118	UBOS	The total enrolment in a primary level of education, regardless of age, expressed as a percentage of the official primary school going- age population.	Divide the number of Pupils/ Students enrolled in primary level of education by the population 6 to 12 years multiply the result by 100.
b): Secondary	Ratio	UNHS	Every 3 years	33.8	33.8	37.9	37.9	36.8	36.8	36.8	36.8	UBOS	The total enrolment in a secondary level of education, regardless of age, expressed as a percentage of the eligible official secondary school	Divide the number of Pupils/ Students enrolled in secondary level of education by the population 13 to 18 years multiply the result by 100.

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodicity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
3.2 Other Indicators related to human assets														
3.2.1: Transition Rate (Primary to Secondary) *	Percent	Education Statistics : UBOS Website	Annual CY	70.5	63.2	64.8	60.6	69.3	na	69.3		UBOS	This is the number of pupils/students admitted to the first Grade of secondary level of education in a given year, expressed as a proportion of the number of candidates who successfully sat and passed the final grade of the primary level of education in the previous year.	Divide the number of students in the first grade of secondary education by the number of pupils who were enrolled in the final grade of the preceding cycle or level of education in the previous year and multiply by 100.
3.3: Net Secondary completion rate													This is the total number of pupils/students (candidates) who registered for their end of cycle exams for secondary regardless of age, expressed as a percentage of the population at the official primary/secondary graduation age.	Divide the number of registered candidates by the 12/16-year-old population, and multiply the result by 100.
4.1: Undernourished Population (%)														
4.1.1: Underweight (Under 5-Years)	Percent	UDHS	Every 5 years	13.8	11	11	11	11	11			UBOS	This refers to the moderate measures below minus two standard deviations	Number of under-fives falling below minus 2 standard deviations from the median weight for age of the children

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodicity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
4.1.2: Stunting (Under 5-Years)	Percent	UDHS	Every 5 years	33.4	29	29	29	29	29			UBOS	This measures the proportional distribution of stunting ((height for age <-2 standard deviation from the median of the World Health Organization (WHO) Child Growth Standards) children in the country	Number of under-fives falling below minus 2 standard deviations from the median height-for-age of the children under 5 years of age in the surveyed population
4.1.3: Prevalence of malnutrition (weight for height >+2 or <-2 standard deviation from the median of the WHO Child Growth Standards) among children under 5 years of age by type a): Wasting	Percent	UDHS	Every 5 years	5	4	4	4	4	4			UBOS	This measures the proportional distribution of wasting ((weight for height <-2 standard deviation from the median of the World Health Organization (WHO) Child Growth Standards) children in the country	Underweight is computed as children whose weight for age Z score is below -2 SD from the median of the reference population are classified as underweight.
4.1.3: Prevalence of malnutrition (weight for	Percent	UDHS	Every 5 years	4.7	4	4	4	4	4			UBOS	Overweight is a measure of over nutrition. Overweight can however also be	Overweight is computed as children whose weight for height Z score is more than 2 SD above the median of the

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodicity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
height >+2 or <-2 standard deviation from the median of the WHO Child Growth Standards) among children under 5 years of age by type b): Overweight													assessed with other indicators such as body mass index for age. In general BMI for age is not used in the joint dataset but has been considered in absence of any other available estimates.	reference population are considered over-weight.
5.1: Population														
5.1.1: Total Population (millions)	Number	Population Stats: UBOS Website	Annual	35.4	36.5	37.8	39	40.3	41.6	42.4	44.4	UBOS	This is the total count of all persons present in the country at the time of the National Population and Housing Census undertaking	Total count of all persons in the country at a particular point in time (defacto).
5.1.2: Population growth rate	Percent	Population Stats: UBOS Website	Every 10 years	3.0	3.0	3.0	3.0	3.1	3.1	3.1	3.1	UBOS	The rate at which the number of individuals in a population changes in a given time period	Growth rate is derived using the exponential formulae for two census data points
5.1.3: Total fertility rate	Number	UDHS	Every 5 years	6.2	5.4	5.4	5.4	5.4	5.4	5.4	5.4	UBOS	Average number of children born alive to a woman during her life time if she were to bear children at each age in accordance with the Prevailing Age-specific fertility rates. It is obtained by summing up all Age-specific fertility rates for each	Using the cumulative parity fertility (P/F) Ratio (Brass method)

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodic ity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
5.1.4: Life expectancy at birth (years)	Number	NPHC 2014	Every 10 years	63.7	63.7	63.7	63.7	63.7	63.7	63.7	63.7	UBOS	This is the average number of years a newborn child is expected to live given the prevailing mortality rates	A cohort of the population is subjected to the probability of dying using the life table method.
5.1.5: Maternal mortality ratio per 100,000 live births	per 100,000 live births	UDHS	Every 5 years	438	336	336	336	336	336	336	336	UBOS	The number of female deaths that occurred during pregnancy, child-birth, or within 42 days of termination of pregnancy because of any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes per 100,000 live births in that year.	The Maternal Mortality Rate divided by the General Fertility rate (GFR) for the same time period, and multiplying the result by 100,000. GFR is calculated by dividing the number of births in a year by the number of women 15–49, times 1000.
5.1.6: Infant mortality rate per 1000 live births	Number per 1,000 live births	UDHS	Every 5 years	54	43	43	43	43	43	43	43	UBOS	This is the probability of a child born in a specific year or period dying before reaching the age of one, if subjected to age-specific mortality rates of that period, per 1000 live births.	The ratio of deaths of infants aged less than one year divided by the total births multiplied by 1000.

UN Indicators /Priority National Indicators	Unit of measure	Data Source	Periodic ity	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	Responsible MDA	Indicator definition	Method of computation
5.1.7: Working-Age Population Employed	Percent	UNHS / NLFS	Every 3 years	47.8	47.8	47.5	47.5	47.5	38.8	38.8	42.5	UBOS	The working-age population is defined as all persons aged 14-64 years that are in employment	Proportion of persons aged 14-64 years that are employed to total population 14 to 64 years multiplied by 100
5.1.8: Labour force in agriculture, forestry and fisheries	Percent	UNHS / NLFS	Every 3 years	71.7	71.7	64.3	64.3	64.3	68.1	68.1	61.4	UBOS	Refers to all persons aged 14-64 years who were working in agriculture, forestry and fisheries	Proportion of persons aged 14-64 years who were working in agriculture, forestry and fisheries to total working population 14 to 64 years multiplied by 100
5.1.9: Working Population in service sector	Percent	UNHS / NLFS	Every 3 years	21	21	28.2	28.2	28.2	23.9	23.9	24.8	UBOS	Refers to all persons aged 14-64 years who were working in service sector	Proportion of persons aged 14-64 years who were working in service sector to total working population 14 to 64 years multiplied by 100
5.1.10: Share of manufacturing jobs to total formal jobs	Percent	UNHS / NLFS	Every 3 years	8.7	8.7	8.4	8.4	8.4	6.7	6.7	8.1	UBOS	This is the proportion of manufacturing jobs to total formal jobs	Total number of manufacturing jobs over the total formal jobs multiplied by 100

		Proportion of population with large household expenditures on health as a share of total household expenditure or income	National	percent	4	UNHS		5.6	5.6	5.6	UBOS	Two thresholds are used to define large household expenditure on health: It is recommended to use two thresholds for global reporting to identify large household expenditure on health as a share of total household consumption or income	Population weighted average number of people with large household expenditure on health as a share of total household expenditure or income where denotes a household, 1() is the indicator function that takes on the value 1 if the bracketed expression is true, and 0 otherwise, mi corresponds to the number of household members of corresponds to the sampling weight of household i, is a threshold identifying large household expenditure on health as a share of total household consumption or income (i.e. 10% and 25%).

NDP 3 Goal and Objectives	Key Result Areas (KRA)	Indicators	Disaggregation	Unit of measure	Development Framework the indicator responds to (1 "NDP3" Vision 2050" 3 "Africa gender 2063" 4 "SDGs")	Data Source	Target 2024/25	Baseline	Data Series		MDA Responsible for the outcome indicator	Definition	Method of Computation
									2020/21	2021/22			
		Growth rates of household expenditure or income per capita among the bottom 40 per cent of the population and the total population	National	Rate	3,4	UNHS, SDG Metadata handbook		2.4			UBOS	The growth rate in the welfare aggregate of bottom 40% is computed as the annualized average growth rate in per capita real consumption or income of the bottom 40% of the income distribution in a country from household surveys over a roughly 5-year period. The national average growth rate in the welfare aggregate is computed as the annualized average growth rate in per capita real consumption or income of the total population in a country from household surveys over a roughly 5-year period.	Growth rates are calculated as annualized average growth rates over a three-year period.
		Proportion of people living below 50 per cent of median income, by sex, age and persons with disabilities	National	percentage	3,4	UNHS		10.8	10.8	10.8	UBOS	The proportion of people living below 50 percent of median income (or consumption) is the share (%) of a country's population living on less than half of the consumption/income level of the median of the national income/consumption distribution. The median is estimate from the same distribution as the indicator is estimated from, thus the 50% of median threshold will vary over time.	The indicator is measured using the national measure of consumption, as derived from surveys. The indicator is calculated by estimating the share (in percent) of the population living on less than 50% of median of the national distribution of consumption. The median is estimate from the same distribution as the indicator is estimated from, thus the 50% of median threshold will vary over time.

Number of under-fives falling below minus 2 standard deviations from the median weight for age of the children under 5 years of age in the surveyed population
		Number of New HIV infections per 1000 population		Number	2,3,4	HMIS	NA	1.2			MoH	The number of new HIV infections per 1000 uninfected population, by sex, age and key populations as defined as the number of new HIV infections per 1000 person-years among the uninfected population.	Data is extracted from DHIS2, ANC Sentinel Sites, UPHIA Surveys and Population Census. The data is cleaned and uploaded to the Spectrum Software. HIV incidence is thus modelled using the Spectrum software
		TB incidence per 1000 persons per year		Number 1000 People	2,3,4	TB Survey		142			MoH		
		Malaria incidence per 1000 per year		Number Per 1000 People	1,3,4	HMIS	NA	340			MoH	Incidence of malaria is defined as the number of new cases of malaria per 1,000 people at risk each year	the number of cases of malaria per unit time divided by the size of the population at risk
